

PETERBILT'S
MEDIUM DUTY

MODEL
337

A **PACCAR** COMPANY

PETERBILT MEDIUM DUTY

Whether you are hauling a delivery or working construction, the new Model 337 has exactly what you need. This truck is designed to help maximize performance while lowering your operational costs with the quality and durability you expect from Peterbilt. With a choice of the fuel-efficient PACCAR PX-6 and PX-8 engines, in both truck and tractor configurations and with a GVW of 26,000 to 33,000 lbs., it can meet the demands of virtually any business and nearly every work application.

Suspension	Front Taper Leaf Rear Reyco 79KB or 102AR Peterbilt Air Trac or Low Air Leaf			
Frame	Steel 10 5/8 inch			

CONVENIENCE, COMFORT & CLASS

Peterbilt's Model 337 provides the driver with an unsurpassed combination of comfort and reliability. The ergonomically designed driver display package features brightly backlit gauges that are easy to read and simple to understand and includes key vehicle performance data. The Model 337 also includes power windows, mirrors, and lock switches all located in the door pad design for added convenience. Dual cup holders are within easy reach of the driver and passenger, and a "dead" pedal provides a comfortable seating position.

BUILT TO LAST

The Model 337 is constructed of an all-aluminum cab that is lightweight for fuel efficiency and corrosion-resistant for durability. The Metton® hood is lightweight but strong, and tilts open a full 90-degrees for easier access to key service points. A new HVAC system not only improves air flow, but also reduces maintenance costs. The dash's "in-mold" color process imbeds color permanently into the material resulting in an extremely durable, fade resistant finish.

VERSATILITY THAT PAYS

The Model 337 is available in either a truck or tractor configuration with a GVW between 26,000 – 33,000 lbs. The Model 337 can meet the demands of virtually any work application and is spec'd to meet the needs of any business, including pickup and delivery, food services and beverage distribution. The Model 337 is also available in an all-wheel-drive configuration specifically designed for Class 7 vocational applications such as construction, petroleum delivery, refuse and utility service where durability, maneuverability and reliable performance are critical.

For environmentally friendly operation, the Model 337 is available in a hybrid electric configuration.

FUEL EFFICIENT POWER

PX-6 engine

PX-8 engine

Peterbilt offers customers a choice of two proprietary, fuel-efficient engines. The PACCAR PX-6 engine (200 - 325 hp) offers the highest horsepower to weight ratio in the industry while the PACCAR PX-8 engine (260 - 380 hp) provides up to 1,050 lb-ft of torque for heavier loads. Advanced electronics help the engine run smoother and more efficiently, as well as reduce service costs. PACCAR engines provide a wide range of horsepower and torque and outstanding fuel economy for greater overall performance.

THE VIEW TO PERFORM

Peterbilt engineers have designed significant visibility improvements into the Model 337. An overall 17% increase in side window visibility was the result of lowered and slanted side window beltlines. Additionally, the dash sightlines have been adjusted to improve forward visibility. This provides an advantage for drivers operating in congested, urban environments or vocational worksites.

PETERBILT VALUE

The Peterbilt Model 337 proves its value every day with every mile.

- Customized finance packages available through PACCAR Financial make purchasing or leasing a new Model 337 a simple and affordable choice.
