SECTION 1 INTRODUCTION

The 2024 Peterbilt Heavy Duty Body Builder Manual was designed to provide body builders with a comprehensive information set to guide the body planning and installation process. Use this information when installing bodies or other associated equipment.

This manual contains appropriate dimensional information, guidelines for mounting bodies, modifying frames, electrical wiring information, and other information useful in the body installation process.

The Peterbilt Heavy Duty Body Builder Manual can be very useful when specifying a vehicle, particularly when the body builder is involved in the vehicle selection and component ordering process. Information in this manual will help reduce overall costs through optimized integration of the body installation with vehicle selection. Early in the process, professional body builders can often contribute valuable information that reduces the ultimate cost of the body installation.

In the interest of continuing product development, Peterbilt reserves the right to change specifications or products at any time without prior notice. It is the responsibility of the users to ensure that they are working with the latest released information. Check [Peterbilt.com](https://www.peterbilt.com) for the latest released version.

If you require additional information or reference materials, please contact your local Peterbilt dealer.

This Page Intentionally Left Blank

SECTION 2 SAFETY AND COMPLIANCE

SAFETY SIGNALS

There are a number of alerting messages in this book. Please read and follow them. They are there for your protection and information. These alerting messages can help you avoid injury to yourself or others and help prevent costly damage to the vehicle.

Key symbols and “signal words” are used to indicate what kind of message is going to follow. Pay special attention to comments prefaced by “WARNING”, “CAUTION”, and “NOTE.” Please do not ignore any of these alerts.

WARNINGS, CAUTIONS, AND NOTES

WARNING

When you see this word and symbol, the message that follows is especially vital. It signals a **potentially hazardous situation** which, if not avoided, could result in death or serious injury. This message will tell you what the hazard is, what can happen if you do not heed the warning, and how to avoid it.

Example:

WARNING! Be sure to use a circuit breaker designed to meet lift-gate amperage requirements. An incorrectly specified circuit breaker could result in an electrical overload or fire situation. Follow the lift-gate installation instructions and use a circuit breaker with the recommended capacity.

CAUTION

Signals a **potentially hazardous situation** which, if not avoided, could result in minor or moderate injury or damage to the vehicle.

Example:

CAUTION: Never use a torch to make a hole in the rail. Use the appropriate drill bit.

NOTE

Provides general information: for example, the note could warn you on how to avoid damaging your vehicle or how to drive the vehicle more efficiently.

Example:

Note: Be sure to provide maintenance access to the battery box and fuel tank fill neck.

Please take the time to read these messages when you see them, and remember:

WARNING

Indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury.

CAUTION

Signals a potentially hazardous situation which, if not avoided, could result in minor or moderate injury or damage to the vehicle.

NOTE

Useful information that is related to the topic being discussed.

FEDERAL MOTOR VEHICLE SAFETY STANDARDS COMPLIANCE

As an Original Equipment Manufacturer, Peterbilt Motors Company, ensures that our products comply with all applicable U.S. or Canadian Federal Motor Vehicle Safety Standards. However, the fact that this vehicle has no fifth wheel and that a Body Builder (Intermediate or Final Stage Manufacturer) will be doing additional modifications means that the vehicle was incomplete when it left the build plant.

INCOMPLETE VEHICLE CERTIFICATION

An Incomplete Vehicle Document is shipped with the vehicle, certifying that the vehicle is not complete. See Figure 2-1. In addition, affixed to the driver's side door frame or edge is an Incomplete Vehicle Certification label. See Figure 2-2.

NOTE

These documents list the U.S. or Canadian Federal Motor Vehicle Safety Standard regulations that the vehicle complied with when it left the build plant. You should be aware that if you add, modify or alter any of the components or systems covered by these regulations, it is your responsibility as the Intermediate or Final Stage Manufacturer to ensure that the complete vehicle is in compliance with the particular regulations upon completion of the modifications.

FIGURE 2-1.
Incomplete Vehicle
Certification Document

FIGURE 2-2. Locations of Certification
Labels - Driver's Door and Frame

As the Intermediate or Final Stage Manufacturer, you should retain the Incomplete Vehicle Document for your records. In addition, you should record and retain the manufacturer and serial number of the tires on the vehicle. Upon completion of the vehicle (installation of the body and any other modifications), you should affix your certification label to the vehicle as required by Federal law. This tag identifies you as the "Intermediate or Final Stage Manufacturer" and certifies that the vehicle complies with Federal Motor Vehicle Safety Standards. (See Figure 2-2.) Be advised that regulations affecting the intermediate and final stage manufacturer may change without notice. Ensure you are referencing the most updated copy of the regulation during the certification and documentation processes.

In part, if the final stage manufacturer can complete and certify the vehicle within the instruction in the incomplete vehicle document (IVD), the certification label would need a statement that reads, "This vehicle has been completed in accordance with the prior manufacturers IVD where applicable. This vehicle conforms to all applicable Federal Motor Vehicle Safety Standards [and Bumper and Theft Prevention Standards if applicable] in effect in (month, year)."

However, if the vehicle cannot be completed and certified within the guidance provided in the IVD, the final stage manufacturer must ensure the vehicle conforms to all applicable Federal Motor Vehicle Safety Standards (FMVSS). The final stage manufacturer's certification label would need a statement that reads, "This vehicle conforms to all applicable Federal Motor Vehicle Safety Standards [and Bumper and Theft Prevention Standards if applicable] in effect in (month, year).

These statements are just part of the certification regulation. Please refer to NHTSA/DOT Title 49 CFR part 567 certification for all of the details related to this regulation.

For Canadian final stage manufacturers see:

<http://www.gazette.gc.ca/index-eng.html>; and
<http://www.tc.gc.ca/eng/acts-regulations/menu.htm> for the regulations.

Or contact: Transport Canada
Tower C, Place de Ville, 330 Sparks Street
Ottawa, Ontario K1A 0N5 (613) 990-2309
TTY: 1-888-675-6863

NOISE AND EMISSIONS REQUIREMENTS

NOTE

This truck may be equipped with specific emissions control components/systems in order to meet applicable Federal and California noise and exhaust emissions requirements. Tampering with these emissions control components/systems is against the rules that are established by the U.S Code of Federal Regulations, Environment Canada Regulations and California Air Resources Board (CARB). These emissions control components/systems may only be replaced with original equipment parts.

Additionally, most vehicles in North America will be equipped with a Greenhouse Gas (GHG) "Vehicle Emission Control Information" door label indicating its certified configuration. The vehicle components listed on this label are considered emission control devices.

Modifying (i.e. altering, substituting, relocating) any of the emissions control components/systems defined above will affect the noise and emissions performance/certification. Modifications that alter the overall shape and aerodynamic performance of a tractor will also affect the emission certification. If modifications are required, they must first be approved by the manufacturer. Unapproved modifications could negatively affect emissions performance/certification. There is no guarantee that proposed modifications will be approved.

Tires may be substituted provided the new tires possess a Coefficient of rolling resistance (Crr) equal to or lower than Crr of the original tires. Consult with your tire supplier(s) for appropriate replacement tires.

Contact the engine manufacturer for any requirements and restrictions **prior** to any modifications.

- For Cummins Contact 1-800-DIESELS or your local Cummins distributor. Reference AEB 21.102.

It is possible to relocate the DEF tank; however the relocation requirements in section 9 of this manual need to be followed. Any variances from the relocation requirements may cause the emissions control components/systems to operate improperly potentially resulting in engine de-rate.

NOTE

All 2017 engine emissions certified vehicles will be equipped with an On-Board Diagnostics (OBD) system. The OBD system is designed to detect malfunctions of any engine or vehicle component that may increase exhaust emissions or interfere with the proper performance of the OBD system itself.

All diesel engines will be equipped with an On-Board Diagnostics (OBD) system. The OBD system consists of computer program on one or more of the vehicle's Electronic Control Units (ECUs). This program uses information from the control system and from additional sensors to detect malfunctions. When a malfunction is detected, information is stored in the ECU(s) for diagnostic purposes. A Malfunction Indicator Light (MIL) is illuminated in the dash to alert the driver of the need for service of an emission-related component or system.

To ensure compliance to emissions regulations, the final configuration of certain features of the completed vehicle must meet specific requirements. This section describes requirements relevant for only the most common or critical modifications done by body builders. For a complete description of acceptable modifications, see the application guidance available from the manufacturer of the engine installed in the chassis.

FUEL SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

The overall system restriction may not exceed the restriction limitations set forth by the engine manufacturer for both supply and return.

- Ensure that fuel lines are not pinched or can potentially be damaged when installed between body and frame
- Fuel lines must be routed and secured without dips or sags
- There must be easy access to filter(s) and fill cap
- The tank vent may not obstructed
- Added accessories (heaters, generators) cannot introduce air into system
- Fuel tank must be located so that the full level is not above cylinder head
- "Ultra-Low Sulfur Fuel Only" labels must be present on the dash and fuel fill
- Modification of the pressure side secondary filter and plumbing is not allowed without engine manufacturer approval
- Body installation of fuel tank or routing of lines must not cause significant increase in fuel temperature
- Fuel hoses shall meet or exceed OEM supplied hose material construction specifications
- Formed nylon fuel lines with quick-connects are installed underneath the cab and hood along the frame rail. Behind the cab from the fuel tee to tanks are wirebraid-reinforced rubber lines. Supply and return fittings are poka-yoked to prevent incorrect assembly.

COMPRESSED AIR SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- Air system modification must meet applicable FMVSS regulations
- Compressed air tank may not be modified (exception – addition or removal of fittings or relocation of the tank)
- Added devices or bodywork may not interfere with or rub air lines
- Air supply to the engine doser may not be restricted or disconnected
- Air lines should be routed, protected from heat, and properly secured to prevent damage from other components
- Care should be taken so that air lines do not rub against other components
- Care should be taken to protect the air system from heat sources.

EXHAUST AND EXHAUST AFTERTREATMENT SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- The following aftertreatment and exhaust system components may not be modified:
 - DPF/SCR Assembly
 - Exhaust pipes between the engine and aftertreatment devices (DPF, SCR Catalyst) and between aftertreatment devices
 - NOx Sensors
 - PM Sensor
- The following modifications may only be done within the guidelines outlined in Section 9 of this manual:
 - Modifications to Diesel Exhaust Fluid (DEF) throttle, suction, or pressure lines
 - Modification or relocation of the DEF tank
 - Modification of coolant lines to and from the DEF tank
- All DEF and coolant lines should be routed, protected, and properly secured to prevent damage during vehicle operation or other components
- The aftertreatment canister mounting may not be modified

- The NOx sensor may not be relocated or altered in any way; this includes re-clocking the aftertreatment canister or reorienting the sensor(s)
- Exhaust pipes used for tailpipes/stacks must be properly sized, and must prevent water from entering
- Ensure adequate clearance between the exhaust and body panels, hoses, and wire harnesses
- The body in the vicinity of the DPF must be able to withstand temperatures up to 400°C (750°F)
- Do not add thermal insulation to the external surface of the DPF
- The aftertreatment canister water drain hole may not be blocked
- Allow adequate clearance (25mm (1 inch)) for servicing the DPF sensors, wiring, and clamped joints
- Drainage may not come in contact with aftertreatment canister, sensors or wiring
- Allow sufficient clearance for removing sensors from DPF. Thermistors require four inches. Other sensors require one inch
- Wiring should be routed, protected from heat, and properly secured to prevent damage from other components
- The exhaust system from an auxiliary power unit (APU) must not be connected to any part of the vehicle aftertreatment system or vehicle tail pipe.

COOLING SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- Modifications to the design or locations of fill or vent lines, heater or defroster core, and surge tank are not recommended
- Additional accessories plumbed into the engine cooling system are not permitted, at the risk of voiding vehicle warranty
- Coolant level sensor tampering will void warranty
- When installing auxiliary equipment in front of the vehicle, or additional heat exchangers, ensure that adequate air flow is available to the vehicle cooling system. Refer to engine manufacturer application guidelines for further detail
- When installing FEPTO drivelines, the lower radiator anti-recirculation seal must be retained with FEPTO driveline clearance modification only
- Changes made to cooling fan circuit and controls are not allowed, with the exception of AC minimum fan on time parameter
- See owner's manual for appropriate winter front usage

ELECTRICAL SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- Electrical harnesses providing battery power and electronic control signals to engine and emissions control/vehicle OBD components including datalinks may not be spliced. These emissions control/vehicle OBD components include the following:
 - throttle pedal
 - vehicle speed sensor
 - aftertreatment wiring
 - 9-pin OBD Connector
 - CAN Communication / OBD wiring
- If the alternator or battery is substituted, it must meet the requirements of the engine manufacturer's guidelines. This includes alternator ground voltage drop and alternator ground cable effectiveness. See the engine manufacturer's guidelines for recommended test procedure. Additionally the maximum voltage differential and the peak-peak voltage differential between the engine ECM block ground stud and battery negative terminal may not exceed 500 mV under any combination of loads or operating conditions.
- Only an OBD compliant battery disconnect switch may be installed on vehicles equipped EPA 2013 and beyond compliant diesel engines. An OBD compliant switch and harness, even in the off position, shall supply a small amount of power to the engine controller and enable certain emissions critical functions (e.g. DEF line purge). Any modifications to the electrical system which interrupt this power supply will cause OBD fault codes and illumination of the MIL. In addition, such a modification will render the engine non-compliant with certain emission regulations. As a general rule of thumb, you can remove and replace a battery disconnect switch on a truck equipped with a battery disconnect switch at the factory. However, if a battery disconnect switch was not installed in the factory a significant harness modification is required before a battery disconnect switch can be added.
- Installation of aftermarket transfer-cases must address the vehicle speed sensor position. The standard position of the speed sensor is at the transmission tail shaft. When a transfer-case is added it is best to relocate the sensor to the axle side output shaft of the transfer-case. This is typically accomplished by adding a tone wheel into the driveline yoke assembly.
- Wiring extensions for the aftertreatment wiring are available for relocating the DEF tank from your dealer via Paccar Parts. For relocation of DEF tank, refer to the aftertreatment section of this manual.
- The emission system requires an accurate Outside Air Temperature (OAT) reading in order to properly run its control algorithms. The OAT sensor is located in the driver's side mirror assembly on Peterbilt trucks and is shown in the figure below. If the body builder needs to modify the mirror assembly in any way, it is important the OAT sensor stay positioned on the mirror assembly. Running the vehicle without the OAT sensor connected will cause the MIL lamp to illuminate. If needed, a replacement sensor can be ordered from your Peterbilt dealer.
- **WARNING! When jump starting using a battery charger/booster, verify that the battery charger/booster is set to the same jump start voltage and amperage specifications as the vehicle electrical system and batteries (i.e. if the vehicle electrical system is a 12 volt system, the jump start voltage on the battery charger/booster shall be set at no higher than a 12 volt setting). Failure to comply may cause an explosion and/or fire resulting in death, personal injury, equipment or property damage.**

FIGURE 2-3: Aerodynamic Mirror OAT Sensor Location

- Coolant Sensor considerations are given in the Cooling section above
- The OBD/Diagnostic connector port is located below the dash to the left of the steering wheel. This connector and its location may not be changed.
- All vehicles equipped with EPA 2013 and beyond compliant diesel and bi-fueled engines must be equipped with a Malfunction Indicator Lamp (MIL) lamp. This lamp is required to be an engine outline symbol as defined by ISO (International Standards Organization). The figure below shows the instrument cluster and MIL lamp position. Note this lamp location is fixed with respect to the controls and its location may not be changed if you are updating the warning lamp cards.

FIGURE 2-4: Digital Display for 579/567/589.

The Check Engine lamp  and/or the MIL  will appear in the Driver Information Display. See 579/567/589 Operator's Manual for more information.

- In addition to the gauges and lamps above, the emission system also depends on signals from the aftertreatment canister and NOx sensor. Wiring between these devices, the doser and engine ECM should not be tampered with or altered in any way. De-rate information is available in the engine aftertreatment system operator manual supplement.

AIR INTAKE SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- The air intake screen may not be blocked, either fully or partially
- Modification to the air intake system may not restrict airflow. For example, pipe diameter may not be reduced
- All sensors must be retained in existing locations
- To retain system seal, proper clamp torque must be used. Refer to service manual for proper clamp torque

CHARGE AIR COOLER SYSTEM

The following are highlights of some of the more common or critical aspects of this system.

- The Charge Air Cooler may not be modified
- The installation of engine over-speed shutdown devices must not introduce restriction in the intake system
- All plumbing associated with the charge air cooler may not be modified

BENDIX WINGMAN FUSION 2.0 RADAR CLEARANCE

Some vehicles are equipped with the Bendix Wingman Fusion bumper mounted radar. When mounting cattle guards or other equipment to the front of the bumper, it is important to follow the manufacturers' guidelines for radar clearance. Please see the diagram below from Bendix SD-61-4963 to ensure proper clearance.

FIGURE 2-5: Fusion 2.0 Radar Clearance

BENDIX WINGMAN FUSION 2.9 RADAR CLEARANCE

Measure from the raised surface at the front of the radar

Keep all deer and moose guards, bumpers, etc. outside of the radar beam clearance area.

For proper sensor performance, the areas in front of and around the sensor antenna radiation cone need to be kept free of any materials or objects that may disturb the radar function.

The only exceptions are OEM-approved covers.

ZONE THAT MUST BE KEPT CLEAR!

NOTE: Drawing is representative only and not to scale. Dimensions are accurate.

FIGURE 2-6: Fusion 2.9 Radar Clearance (Bendix SD-29-50022)

Additional service documentation for the Wingman Fusion system can be found on the Bendix website in the document library.

GENERAL WIRE ROUTING

The following are highlights of some of the more common or critical aspects of this system.

- Whenever possible, battery cables, electrical wires, and wire harnesses should be secured by clamps attached to rigid components (for example, the engine, frame, bracket, etc.) or secured by tie straps fastened to other restrained lines at intervals not exceeding 460mm (18 in.).
- Battery cables, alternator cables, electrical wires, and wire harnesses routed on the chassis and engine should be covered by braided loom or convoluted tubing.
- At the clamping or tie points, battery cables, electrical wires, and wire harnesses should be covered by braided loom or convoluted tubing.

SAFETY RELATED COMPONENTS AND SYSTEMS

Upfitting and other modifications may change the compliance of an as-built vehicle. As such, Peterbilt will not support any modifications that affect the as-built compliance of a vehicle. These may include modifications to the following:

- **Stability Control Systems** –Stability Control parameters are matched specifically to chassis components and center of gravity of the body type. Chassis modifications or alterations to wheelbase, GAWR, GVWR, brakes, suspension and other components affect the Stability Control system. Therefore, modifications or alterations to chassis with factory-installed Stability Control Systems are not supported.

These include:

- Intended Service
- Body Type
- Wheelbase (reducing or increasing wheelbase)
- GAWR
- GVWR
- Brakes
- Suspension
- Lift Axles (removal or addition)
- Conversion of a truck to a tractor
- Factory installed Safety Systems - Factory installed Safety Systems will not be removed or inactivated
- Green House Gas Requirements

This page is intentionally left blank.

SECTION 3 DIMENSIONS

INTRODUCTION

This section has been designed to provide enough information to successfully layout a chassis in the body planning process. All dimensions are in inches unless otherwise noted. Optional equipment may not be depicted. Please contact your local Peterbilt dealer if more dimensional information is desired.

ABBREVIATIONS

Throughout this section and in other sections as well, abbreviations are used to describe certain characteristics on your vehicle. The chart below lists the abbreviated terms used.

TABLE 3-1. Abbreviations Used

CA	Cab to axle. Measured from the back of the cab to the centerline of the rear axle(s).
EOF	Frame rail overhang behind rear axle--measured from the centerline of tandems
FOF	Front of frame
FAX	Front Axle
BOC	Back of cab
SOC	Side of cab
WB	Wheelbase
BFA	Bumper to front axle. Measured from front of bumper centerline of front axle.
BBC	Bumper to back of cab Measured from front of bumper to back of cab.

OVERALL DIMENSIONS

This section includes drawings and charts of the following Peterbilt Models: 589, 579, and 567.

On the pages that follow, detail drawings show particular views of each vehicle; all dimensions are in inches (in). They illustrate important measurements critical to designing bodies of all types. See the "Contents" at the beginning of the manual to locate the drawing that you need.

All heights are given from the bottom of the frame rail.

Peterbilt also offers .dxf files and frame layouts of ordered chassis prior to build. Please speak with your local dealership to request this feature when specifying your chassis.

FRAME RAILS

Frame rail configurations are shown in FIGURE 3-10. Rail height, flange and structural values can be found in the Body Mounting Section.

FIGURE 3-11. Frame Rail Configurations

NOTE: The outserted frame section does not extend through the rear suspension area.

FRAME HEIGHT CHARTS

THE FOLLOWING FRAME HEIGHT CHARTS MAY BE USED FOR FINDING APPROXIMATE FRONT AND REAR FRAME HEIGHTS.

THE RESULTS ARE APPROXIMATIONS BECAUSE OF THE MANY VARIABLES SUCH AS TIRE TREAD THICKNESS, MANUFACTURING TOLERANCES, SPRING SET, AND THE LOADING IMPOSED IN THE LOADED SITUATION.

LOADED VALUES ARE QUOTES FOR REPRESENTATIVE LOADS AT THE GROUND FOR THE PARTICULAR SPRING AND AXLE COMBINATION, AND, AS SUCH, CAN VARY WITH LOADING VARIATIONS.

SPECIAL INSTALLATIONS ARE SOMETIMES POSSIBLE WITH CERTAIN SUSPENSIONS ALLOWING VARIATIONS FROM STANDARD. PLEASE CONTACT APPLICATIONS ENGINEERING FOR INFORMATION.

FRONT FRAME HEIGHT

REAR FRAME HEIGHT

NOTES:

- (1) "B" AND "D" DIMENSIONS CAN BE FOUND IN THE TIRES/WHEELS SECTION OR IN THE TIRE VENDOR'S LITERATURE.

FIGURE 3-12. Frame Height

TABLE 3-3. Front Frame Height "A" - SFFA

SFFA SUSPENSION			SPACER (mm)	LIGHT	LOADED
12,000 lbs. ³	TAPERLEAF	SFFA	10	9.3	8.9
			20	9.7	9.3

RS850 w/SISU 70K	85,000 lbs	16.75 saddle	14.5	13.8

NOTES:

- 1) With SISU 70K axle subtract .39" from light/laden.
- 2) With SISU 70K axle subtract .28 from light and .39 from laden.
- 3) With Meritor 70K axles frame height is 22.5" for R650.

REAR SUSPENSION LAYOUTS

The rear suspension layouts are provided as a tool to help layout bodies prior to arrival. The applicable dimensions are shown. Be sure to check the axle spacing that is shown, as alternate spacing may exist and could change some of the dimensions. The dimensions shown are the most typical installations, in special cases some hole locations will move. If you are planning on using the holes shown for your body installation, please confirm with your local Peterbilt dealer that the drawing below will be the installation used on your specific truck. Ensure that proper torque is used to reinstall any suspension components. It would be a good idea in this case to order the frame layout of your chassis along with your truck order. This can be done on any Peterbilt truck, and will be provided ahead of the build schedule.

If there are hole locations that are not detailed please work with your local Peterbilt Dealer to request that information.

Additionally optional axle spacing are shown in the charts, if you would like details on the frame drilling with optional spacing, please contact your local Peterbilt dealer.

NOTE: Actual axle spacing can depart from nominal due to axle slant requirements. Final axle spacing can vary by more than an inch from nominal in some cases. If precise axle spacing is critical due to body installation or state/local regulatory requirements please contact Peterbilt Applications/Technical Support for assistance.

LIFT AXLES (PUSHERS AND TAGS)

The rear pusher axle layouts are provided as a tool to help layout bodies prior to arrival. The applicable dimensions are shown. When using the pusher layouts to determine available frame space please be aware that clearances required are not shown. For information that may not be detailed in these drawings work with your local Peterbilt Dealer to request that information.

Peterbilt will automatically install highest lift axle kit as applicable based on chassis frame height and loading conditions. Lift axle available run range it utilized, along with frame height and lift axle tire size to identify applicable kits that can be installed. Installing highest lift axle kit will maximize ground clearance when axle is in lifted state. If needed, kit may be lowered in order to clear driveline when in lifted state.

AXLE TRACK AND TIRE WIDTH

The dimensions provided in this section are representative of some typical product combinations. The purpose of this section is to demonstrate some of the typical dimensions.

- Axle Track: The distance between the dual tire centerlines on a dual tire arrangement or the distance between the tire centerlines on a single tire arrangement.
- Width: The distance over the outermost tire sidewall to sidewall.

These dimensions may be significant to the following:

- Appearance relative to other tires and chassis mounted equipment.
- Load carrying capacity. Different wheel disc offset can have a positive or negative impact on the axle carrying capacity of the axle.

TABLE 3-21. Axle Width Calculation.

FRONT DRIVE AXLE, PTO'S AND AUXILIARY TRANSMISSIONS

The front drive axle, PTO, and auxiliary transmission layouts are provided as a tool to help layout bodies prior to arrival. For information not detailed in these drawings, work with the local Peterbilt dealer to request that information.

EXAMPLES

FIGURE 3-13. Front Drive Axle with Spaghetti Drive Example

EXHAUST HEIGHT CALCULATIONS

The exhaust height calculations are provided as a tool to help layout bodies prior to arrival as well as aid in exhaust configuration selection.

Please work with the local Peterbilt Dealer to request additional information if required.

The overall exhaust height (EH) can be estimated based on the following formula: $EH = Y + SPL + (A + B + C + D) / 2$

TABLE 3-22. Exhaust Heights

Y = DISTANCE FROM BTM OF FRAME RAIL TO BTM OF STANDPIPE		
Exhaust Location	Model 579, 567	Model 589
SOC Mounted (Day Cab)	70.2 in.	67.2 in.
SOC Mounted (Sleeper)	67.6 in.	65.6 in.
BOC Mounted	69.2 in.	68.2 in.
Frame Mounted	86.0 in.	86.0 in.

NOTES:

- 4) For "A" and "C" values, reference the FRAME HEIGHTS section for front or rear suspension height.
- 5) For "B" and "D" values, reference the tire manufacturer's website or catalog for static loaded radius (SLR).
- 6) For Stand Pipe Length (SPL) values, reference the truck sales order.

FIGURE 3-25. Exhaust Height Calculations

GROUND CLEARANCE CALCULATIONS

The ground clearance tables are provided as a tool as a tool to help layout bodies prior to arrival, not all optional equipment is included.

The ground clearance (GC) can be estimated based on the following formula: $GC = (A + B + C + D) / 2 - Y$

TABLE 3-23. Ground Clearance

Y = DISTANCE FROM BOTTOM OF FRAME TO BOTTOM OF COMPONENT	
Component	Y
RHUC DPF/SCR	16.7 in. *
Horizontal Under Frame DPF/SCR	16.6 in.
Battery/Tool Box	15.4 in.
Space Saver Battery Box (w/o Air Tanks or Step)	3.9 in.
Space Saver Battery Box (w/ Air Tanks or Step)	12.7 in.
Frame Mounted Ladder Step	13.9 in.
20" Diameter Fuel Tank	12.4 in.
23" Diameter Fuel Tank	15.2 in.
26" Diameter Fuel Tank	18.0 in.
DEF Tank	16.1 in.

FIGURE 3-26. Ground Clearance Calculations

NOTES:

- 1) For "A" and "C" values, reference the FRAME HEIGHTS section for front suspension height or rear suspension height.
- 2) For "B" and "D" values, reference the tire manufacturer's website or catalog for overall diameter or static loaded radius (SLR).
- 3) * 17.7 in. on Model 589

OVERALL CAB HEIGHT CALCULATIONS

The overall cab height tables are provided as a tool to help layout bodies prior to arrival, no roof mounted equipment is included.

The overall cab height (CH) can be estimated based on the following formula: $CH = (A + B + C + D) / 2 + Y$

TABLE 3-24. Overall Cab Height
Y = DISTANCE FROM BTM OF FRAME TO TOP OF STANDARD CAB ROOF

Model	Y
589	81.8 in.
579 / 567	83.7 in.

FIGURE 3-27. Overall Cab Height Calculations

NOTES:

- 1) For “A” and “C” values, reference the FRAME HEIGHTS section for front suspension height or rear suspension height.
- 2) For “B” and “D” values, reference the tire manufacturer’s website or catalog for overall diameter or static loaded radius (SLR).
- 3) Roof mounted content such as horns and antennas are not included.

FRAME COMPONENTS

This section includes drawings and charts related to common frame mounted components. Optional equipment may not be depicted.

Please work with the local Peterbilt Dealer to request additional information if required. At the dealer's request, Peterbilt can provide frame layouts for individual vehicles prior to delivery.

FUEL TANKS

FIGURE 3-28. Fuel Tanks

TABLE 3-25. Fuel Tank Dimensions

135	147	N/A	N/A	66.8
150	163	N/A	N/A	*74.0

NOTES:

- 1) * Largest capacity without a weld seam.

DEF TANKS

FIGURE 3-29. DEF Tank Dimensions (Medium Tank Shown)

TABLE 3-27. DEF Tank Dimensions and Data

DESCRIPTION	GALLONS	A"	B"	C"	D"
SMALL DEF TANK	10.2	27.7	15.7	Varies	10.2
MEDIUM DEF TANK	16.1	27.7	15.7	Varies	16.1
LARGE DEF TANK	20.1	27.7	15.7	Varies	20.1
MEDIUM AERO	13.9	28.9	15.7	Varies	13.9
LARGE AERO	17.9	28.9	15.7	Varies	17.8

Note: Dimension C will be equal to the height of the ordered frame rails. For example, 10-5/8" frame rails dimension C will be 10.625".

OTHER FRAME COMPONENTS

TABLE 3-28. Other Frame Component Dimensions

DESCRIPTION	LENGTH
STANDARD BOC BATTERY BOX	40.9
STANDARD BOC TOOL BOX	31.6
SPACE SAVER BATTERY BOX W/ STEP	28.2
SPACE SAVER BATTERY BOX W/O STEP	25.1
FRAME MOUNTED LADDER STEP	12.8

FRAME SPACE REQUIREMENTS

This section includes drawings and charts related to frame space components to ensure adequate space for fuel tanks, ladder steps, additional tool/battery boxes, pusher axles and other frame mounted components, the amount of available space must be calculated by using the formula below.

BASIC FORMULA: BOC Frame Space = Wheelbase - Dimension A - Dimension C - Dimension B

Dimension "A" (shown in charts on following pages) is the minimum clearance measured from the centerline of the front axle to the back of the under cab component (DPF/SCR exhaust, fuel tank, battery box, tool box, etc). Dimension "C" is the amount of space from the rear of the under cab component to the back of the DEF tank (can be on LH or RH rail). Dimension "B" is the amount of required suspension and quarter fender clearance from the rear axle centerline to clear rail for a given suspension.

REAR SUSPENSION

TABLE 3-29. Rear Suspension Frame Space Requirements

FRAME SPACE REQUIREMENTS			
DIMENSION "B" IN INCHES (52" Axle Spacing on Tandems)			
REAR SUSPENSION	"B"	OVERHANG (1)	NOTES
AIR LEAF	53.0	53.0	2
LOW/LOW LOW AIR LEAF	62.4	53.0	
LOW AIR LEAF SINGLE	36.5	27.0	
AIR TRAC SINGLE	27.0	27.0	3
AIR TRAC TANDEM	53.0	53.0	3
FLEX AIR	59.0	53.7	8
CHALMERS 800 (54" SPACING)	49.0	52.0	4
HENDRICKSON HLM / AL	26.6	N/A	6, 7
HENDRICKSON HLR2	30.5	N/A	6, 7

HENDRICKSON R/RS/RT/RTE	53.0	53.0	3
HENDRICKSON SC20	25.6	15.0	6, 7
HENDRICKSON SC8/10/13, FX, FXO, SCO	23.6	13.8	5, 6, 7
NEWAY ADZ (54" SPACING)	61.0	58.3	
REYCO 102 SINGLE	30.0	25.8	
REYCO 102AR SINGLE	30.0	31.0	
REYCO 102 TANDEM	56.0	52.7	
REYCO 79KB	30.1	32.2	
WATSON-CHALIN AL2200	26.6	22.2	6, 7
WATSON-CHALIN SL0893SSR	27.6	11.8	5, 6, 7
WATSON-CHALIN SL1093SSR	27.6	11.8	6, 7
WATSON-CHALIN SL1190SSR	26.0	12.8	6, 7
WATSON-CHALIN SL2065	28.8	14.4	6, 7

Notes:

1. Overhang for tractor taper EOF and standard mudflap hangers on suspensions; Square EOF w/o Crossmember for Lift Axles.
2. Add 2.0" to "B" dimension with quarter fenders.
3. Add 1.5" to "B" dimension with quarter fenders.
4. Add 0.6" to "B" dimension with quarter fenders.
5. Add 2.8" to "B" dimension with quarter fenders.
6. Add 3.0" to "B" dimension if pusher is mounted behind sleeper. The suspension bracket protrudes 3" BOS.
7. "B" dimension is from axle centerline (or bogie for tandem) to clear frame forward.
8. Extended Tractor Taper requires 58.0" overhang.

LH Aero Batt w/ Undercab Fairings						YES	66.1		20.5	0.0

Open Frame Space = Wheelbase - (A + B + C)

- 1) Find the Under Cab Component "A" applicable to your spec for either RH or LH rail.
- 2) Find the total fuel capacity of the vehicle to determine the DEF tank size used.
- 3) Find the DEF tank dimension "C" dependent on U/C tanks, DPF/SCR position or bat/tool boxes
- 4) Note that the "B" dimension is the rear suspension clearance.
- 5) If you want to find BOC Protrusion Subtract the A (or A+C) dimension from 74.1" (front axle to BOC dimension)

Notes:

- 1) DEF tank locations are sometimes dependent on sleeper box length, noted in column "capacity/DC, slpr", otherwise DEF tank location is good for 58/72/80" sleepers as shown.
- 2) DEF tanks not available on RH rail with Under Frame exhaust.

Open Frame Space = Wheelbase - (A + B + C)

- 1) Find the Under Cab Component "A" applicable to your spec for either RH or LH rail.
- 2) Find the total fuel capacity of the vehicle to determine the DEF tank size used.
- 3) Find the DEF tank dimension "C" dependent on U/C tanks, DPF/SCR position or bat/tool boxes
- 4) Note that the "B" dimension is the rear suspension clearance.
- 5) If you want to find BOC Protrusion Subtract the A (or A+C) dimension from 68.2" (front axle to BOC dimension)

Notes:

- 1) DEF tank locations are sometimes dependent on sleeper box length, noted in column "capacity/DC, slpr", otherwise DEF tank location is good for 58/72/80" sleepers as shown.
- 2) DEF tanks not available on RH rail with Under Frame exhaust.

Open Frame Space = Wheelbase - (A + B + C)

- 1) Find the Under Cab Component "A" applicable to your spec for either RH or LH rail.
- 2) Find the total fuel capacity of the vehicle to determine the DEF tank size used.
- 3) Find the DEF tank dimension "C" dependent on U/C tanks, DPF/SCR position or bat/tool boxes
- 4) Note that the "B" dimension is the rear suspension clearance.
- 5) If you want to find BOC Protrusion Subtract the A (or A+C) dimension from 90.1" (front axle to BOC dimension)

Notes:

- 1) DEF tank locations are sometimes dependent on sleeper box length, noted in column "capacity/DC, slpr", otherwise DEF tank location is good for 44/58/72/80" sleepers as shown.
- 2) DEF tanks not available on RH rail with Under Frame exhaust.

SECTION 4 BODY MOUNTING

INTRODUCTION

This section has been designed to provide guidelines to aid in body mounting. This is not intended as a complete guide, rather as general information. Body mounting strategies are unique to each body type and body builder must determine the appropriate method. Please note, an alignment adjustment is required after body installation. Front alignment and rear alignment must be performed prior to putting the vehicle into service.

Please contact your local Peterbilt dealer if more information is desired.

FRAME RAILS

Frame rail information is provided per rail.

TABLE 4-1. Single Frame Rails

Rail Height (in.)	Flange Width (in.)	Web Thickness (in)	Section Modulus (cu. In.)	RBM (per rail) (in.-lbs)	Weight (per rail) (lbs/in.)
10 5/8	3.45	0.313	14.8	1,776,000	1.44
10 3/4	3.50	0.375	17.8	2,136,000	1.74
10 11/16	3.50	0.500	22.35	2,683,000	2.35
11 5/8	3.875	0.375	21.4	2,568,000	1.91
13 3/8 ⁽¹⁾	3.625	0.375	18.2 25.1	2,184,000 3,012,000	1.78 2.05

⁽¹⁾The 13 3/8 rail has a front rail height of 10 3/4. The front rail height values are listed on top of the 13 3/8 values.

TABLE 4-2. Built-up Frame Rails

Main Rail Height (in.)	Insert	Outsert	Section Modulus (cu. In.)	RBM (per rail) (in.-lbs)	Weight (per rail) (lbs/in.)
10 5/8	9.875 x 2.87 x .250	None	23.6	2,832,000	2.48
10 3/4	9.875 x 2.87 x .250	None	28.9	3,468,000	2.78
10 3/4	9.875 x 2.87 x .250	11.625 x 3.87 x .375	45.7	5,484,000	4.67
11 5/8	10.75 x 3.50 x .375	None	37.7	4,524,000	3.65

CRITICAL CLEARANCES

REAR TIRES AND CAB

CAUTION: *Insufficient clearance between rear tires and body structure could cause damage to the body during suspension movement.*

Normal suspension movement could cause contact between the tires and the body. To prevent this, mount the body so that the minimum clearance between the top of the tire and the bottom of the body is 8 inches (203 mm). This should be measured with the body empty. See **FIGURE 4-1**.

FIGURE 4-1. Minimum Clearance Between Top of Rear Tires and Body Structure Overhang

CAUTION: *Maintain adequate clearance between back of cab and the front (leading edge) of mounted body. It is recommended the body leading edge be mounted 4 in. behind the cab. See **FIGURE 4-2**.*

NOTE: *Be sure to provide maintenance access to the battery box and fuel tank fill neck.*

FIGURE 4-2. Minimum Back of Cab Clearance

BODY MOUNTING USING BRACKETS

CAUTION: Always install a spacer between the body subframe and the top flange of the frame rail. Installation of a spacer between the body subframe and the top flange of the frame rail will help prevent premature wear of the components due to chafing or corrosion.

WARNING! When mounting a body to the chassis, DO NOT drill holes in the upper or lower flange of the frame rail. If the frame rail flanges are modified or damaged, the rail could fail prematurely and cause an accident. Mount the body using body mounting brackets or U-bolts.

FRAME SILL

If the body is mounted to the frame with brackets, we recommend a frame sill spacer made from a strip of rubber or plastic (delrin or nylon). These materials will not undergo large dimensional changes during periods of high or low humidity. The strip will be less likely to fall out during extreme relative motion between body and chassis. See **FIGURE 4-3**.

FIGURE 4-3. Spacer Between Frame Sill and Body Rail – Rubber or Plastic

BRACKETS

When mounting a body to the chassis with brackets, we recommend designs that offer limited relative movement, bolted securely but not too rigid. Brackets should allow for slight movement between the body and the chassis. For instance, **FIGURE 4-4** shows a high compression spring between the bolt and the bracket, and **FIGURE 4-5** shows a rubber spacer between the brackets. These designs will allow relative movement between the body and the chassis during extreme frame racking situations. Mountings that are too rigid could cause damage to the body. This is particularly true with tanker installations.

FIGURE 4-4. Mounting Brackets

FIGURE 4-5. Mounting Brackets

MOUNTING HOLES

When installing brackets on the frame rails, the mounting holes in the chassis frame bracket and frame rail must comply with the general spacing and location guidelines illustrated in **FIGURE 4-6**.

FIGURE 4-6. Hole Location Guidelines for Frame Rail and Bracket

FIGURE 4-7. Crossmember Gusset Hole Patterns (Additional Holes Available in 50 mm Horizontal Increments)

FRAME DRILLING

WARNING! *When mounting a body to the chassis, DO NOT drill holes in the upper or lower flange of the frame rail. If the frame rail flanges are modified or damaged, the rail could fail prematurely and cause an accident. Mount the body using body mounting brackets or U-bolts.*

FIGURE 4-8. Frame Rail Flange Drilling Prohibited

WARNING! *DO NOT drill closely spaced holes in the frame rail. Hole centers of two adjacent holes should be spaced no less than twice the diameter of the largest hole. Closer spacing could induce a failure between the two holes.*

CAUTION: *An appropriately sized bolt and nut must be installed and torqued properly in all unused frame holes. Failure to do so could result in a frame crack initiation around the hole.*

CAUTION: *Use care when drilling the frame web so the wires and air lines routed inside the rail are not damaged. Failure to do so could cause an inoperable electrical or air system circuit.*

CAUTION: *Never use a torch to make holes in the rail. Use the appropriate diameter drill bit. Heat from a torch will affect the material properties of the frame rail and could result in frame rail cracks.*

CAUTION: *The hole diameter should not exceed the bolt diameter by more than .060 inches (1.5mm).*

BODY MOUNTING USING U-BOLTS

If the body is mounted to the frame with U-bolts, use a hardwood sill (minimum 1/2 inch (12.7 mm) thick) between the frame rail and body frame to protect the top surface of the rail flange.

WARNING! Do not allow the frame rails or flanges to deform when tightening the U-bolts. It will weaken the frame and could cause an accident. Use suitable spacers made of steel or hardwood on the inside of the frame rail to prevent collapse of the frame flanges.

Use a hardwood spacer between the bottom flange and the U-bolt to prevent the U-bolt from notching the frame flange. See **FIGURE 4-9**.

FIGURE 4-9. Acceptable U-Bolt Mounting with Wood and Fabricated Spacers

WARNING! Do not allow spacers and other body mounting parts to interfere with brake lines, fuel lines, or wiring harnesses routed inside the frame rail. Crimped or damaged brake lines, fuel lines, or wiring could result in loss of braking, fuel leaks, electrical overload or a fire. Carefully inspect the installation to ensure adequate clearances for air brake lines, fuel lines, and wiring. See **FIGURE 4-10**.

FIGURE 4-10. Clearance Space for Air Lines and Cables

WARNING! Do not notch frame rail flanges to force a U-bolt fit. Notched or damaged frame flanges could result in premature frame failure. Use a larger size U-bolt.

CAUTION: Mount U-bolts so they do not chafe on frame rail, air or electric lines.

REAR BODY MOUNT

When U-bolts are used to mount a body we recommend that the last body attachment be made with a “fishplate” bracket. See **FIGURE 4-11**. This provides a firm attaching point and helps prevent any relative fore or aft movement between the body and frame. For hole location guidelines, See **FIGURE 4-7**.

FIGURE 4-11. Fishplate Bracket at Rear End of Body

This page is intentionally left blank.

SECTION 5 FRAME MODIFICATIONS

INTRODUCTION

Peterbilt offers customer specified wheelbases and frame overhangs. So, in most cases frame modifications should not be necessary.

However, some body installations may require slight modifications, while other installations will require extensive modifications. Sometimes an existing dealer stock chassis may need to have the wheelbase changed to better fit a customer's application. The modifications may be as simple as modifying the frame cutoff, or as complex as modifying the wheelbase.

DRILLING RAILS

If frame holes need to be drilled in the rail, see SECTION 4 BODY MOUNTING for more information.

MODIFYING FRAME LENGTH

The frame overhang after the rear axle can be shortened to match a particular body length. Using a torch is acceptable; however, heat from a torch will affect the material characteristics of the frame rail. The affected material will normally be confined to within 1 to 2 inches (25 to 50mm) of the flame cut and may not adversely affect the strength of the chassis or body installation.

CHANGING WHEELBASE

Changing a chassis' wheelbase is not recommended. Occasionally, however, a chassis wheelbase will need to be shortened or lengthened. Before this is done there are a few guidelines that should be considered.

WARNING! When changing the wheelbase, be sure to follow the driveline manufacturer's recommendations for driveline length or angle changes. Incorrectly modified drivelines can fail prematurely due to excessive vibration. This can cause an accident and severe personal injury.

WARNING! When changing the wheelbase, contact your local Peterbilt dealership for support. It is important to verify that these changes do not compromise vehicle frame strength.

Before changing the wheelbase, the driveline angles of the proposed wheelbase need to be examined to ensure no harmful vibrations are created. Consult with the driveline manufacturer for appropriate recommendations.

Before the rear suspension is relocated, check the new location of the spring hanger brackets. The new holes for the spring hanger brackets must not overlap existing holes and should adhere to the guidelines in the "FRAME DRILLING" section of this manual.

When shortening the wheelbase, the suspension should be moved forward and relocated on the original rail. The rail behind the suspension can then be cut to achieve the desired frame overhang.

See **FIGURE 5-1**.

DO NOT MOUNT THE SUSPENSION BRACKET ON THE ADDED FRAME RAIL

CUT FRAME AT REAR TO OBTAIN DESIRED CUTOFF

FIGURE 5-1. Wheelbase Customization

CROSSMEMBERS

After lengthening a wheelbase, an additional crossmember may be required to maintain the original frame strength. The maximum allowable distance between the forward suspension crossmember and the next crossmember forward is 47.2 inches (1200 mm). If the distance exceeds 47.2 inches (1200 mm) after the wheelbase is lengthened, add a crossmember between them.

FIGURE 5-2. Crossmember Spacing Requirements

TORQUE REQUIREMENTS

Torque values apply to fasteners with clean threads, lightly lubricated, with hardened steel washers, and nylon-insert nuts.

TABLE 5-1. Customary Grade 8 UNF or UNC.

Fastener Size	Torque	
	Nm	lb-ft
5/16	22–30	16–22
3/8	41–54	30–40
7/16	75–88	55–65
1/2	109–122	80–90
9/16	156–190	115–140
5/8	224–265	165–195
3/4	394–462	290–340
7/8	517–626	380–460
1	952–1129	800–830
1-1/8	1346–1591	990–1170
1-1/4	1877–2217	1380–1630

TABLE 5-2. U.S. Customary - Grade 8 Metric Class 10.9

Fastener Size	Torque	
	Nm	lb-ft
M6	9–15	7–11
M8	23–31	17–23
M10	33–43	24–32
M12	75–101	55–75
M14	134–164	99–121
M16	163–217	120–160
M20	352–460	260–340

WELDING

The frame rails are heat treated and should not be welded. The high heat of welding nullifies the special heat treatment of the rails, greatly reducing the tensile strength of the frame rail. If a frame member becomes cracked from overloading, fatigue, surface damage or a collision, the only permanent repair is to replace the damaged frame member with a new part.

The following information is provided (for temporary emergency repair). Prior to welding a cracked frame rail, the area should be beveled (V'd out) to allow for a better weld. To prevent spreading of the crack, a 7 to 9 mm (1/4 in. to 3/8 in.) diameter hole should be drilled at the end of the crack. Widen the crack along its full length by using two hack saw blades together. When welding steel frames use the shielded arc method. When welding aluminum frames use either the tungsten inert gas (TIG) or consumable electrode method. Be sure to obtain full weld penetration along the entire length of the crack.

PRECAUTIONS**CAUTION:**

Before welding, disconnect the negative terminal battery cable.

CAUTION:

Before welding, disconnect the alternator terminals. Failure to do so could result in damage to the voltage regulator and/or alternator.

CAUTION:

To prevent damage to electrical equipment, disconnect battery cables before arc-welding on a truck, and be sure that the welding ground lead is connected to the frame. Bearings and other parts will be damaged if current must pass through them in order to complete the circuit.

WELDING PRECAUTIONS: ALL ELECTRONIC ENGINES

Before welding on vehicles with electronic engines, the following precautions should be observed.

1. Disconnect all electrical connections to the vehicle batteries.
2. Disconnect all ECM connectors.
3. Do not use the ECM or engine ground stud for the ground of the welding probe.
4. Ensure that the ground connection for the welder is as close to the weld point as possible. This ensures maximum weld current and minimum risk to damage electrical components on the vehicle.
5. Turn off key.

NOTE:

Bosch ABS and Wabco ABS: Disconnect ECU.

SECTION 6 CAN COMMUNICATIONS

INTRODUCTION

Controller Area Network (CAN) is a serial network technology that was originally designed for the automotive industry but has also become popular in the commercial trucking industry. The CAN bus is primarily used in the embedded systems and network technology that provides fast communication among controllers up to real-time requirements, eliminating the need for the much more expensive and complex technology.

CAN is a two-wire high-speed network system, that is far superior to conventional hardwired technologies functionality and reliability. CAN implementations are more cost effective. CAN is designed for real-time requirements which can easily beat hardwire connections when it comes to short reaction times, timely error detection, quick error recovery and error repair.

Characteristics of the Controller Area Network

- A serial networking technology for embedded solutions
- Needs only two wires to communicate messages
- Operates at data rates of 250K and 500K
- Supports a maximum of 8 bytes per message frame
- One application can support multiple message IDs
- Supports message priority, i.e. the lower the message ID the higher its priority

CAN COMMUNICATIONS ACRONYM LIBRARY

Acronym	Definition
CAN	Controller Area Network
J-1939	SAE CAN Communication Standard
PGN	Parameter Group Number
PTO	Power Take Off
SPN	Suspect Parameter Number
SCR	Selective Catalytic Reduction
DPF	Diesel Particulate Filter
TSC1	Torque Speed Commands

SAE J1939

The Society of Automotive Engineers (SAE) Communications Subcommittee for Truck and Bus Controls has developed a family of standards concerning the design and use of devices that transmit electronic signals and control information among vehicle components. SAE J1939 and its companion documents are the accepted industry standard for the vehicle network of choice for commercial truck applications. SAE J1939 is used in the commercial vehicle area for communication in the embedded systems of the commercial vehicle.

SAE J1939 uses CAN as physical layer. It is a recommended practice that defines which and how the data is communicated between the Electronic Control Units within a vehicle network. Typical controllers are the Engine, Brake, Transmission, etc. The messages exchanged between these units can be data such as vehicle road speed, torque control message from the transmission to the engine, oil temperature, and many more.

Characteristics of J1939

- Extended CAN identifier (29 bit)
- Peer-to-peer and broadcast communication
- Network management
- Definition of parameter groups for commercial vehicles and others
- Manufacturer specific parameter groups are supported
- Diagnostics features
- A standard developed by the Society of Automotive Engineers
- Defines communication for vehicle networks
- A Higher-Layer Protocol using CAN as the physical layer
- Uses shielded twisted pair wire
- Applies a maximum network length of 120 ft.
- Applies a standard baud rate of 250 Kbit/sec
- Supports peer-to-peer and broadcast communication
- Supports message lengths up to 1785 bytes
- Defines a set of Parameter Group Numbers
- Supports network management

PARAMETER GROUP NUMBER

Parameter Groups contain information on parameter assignments within the 8-byte CAN data field of each message as well as repetition rate and priority. Parameters groups are, for instance, engine temperature, which includes coolant temperature, fuel temperature, oil temperature, etc. Parameter Groups and their numbers are listed in SAE J1939 and defined in SAE J1939/71, a document containing parameter group definitions plus suspect parameter numbers.

SUSPECT PARAMETER NUMBER

A Suspect Parameter Number is a number assigned by the SAE to a specific parameter within a parameter group. It describes the parameter in detail by providing the following information:

Data Length in bytes
Data Type
Resolution
Offset
Range
Reference Tag (Label)

SPNs that share common characteristics are grouped into Parameter Groups and they will be transmitted throughout the network using the Parameter Group Number.

CAN MESSAGES AVAILABLE ON BODY CONNECTIONS

SPN	CAN Signal Description	PGN	CAN BUS
38	Fuel Level 2	65276, DD1	SCAN, KCAN
46	Pneumatic Supply Pressure	65198, AIR1	SCAN, KCAN, BCAN

SECTION 7 ELECTRICAL 579/589 FAMILY

INTRODUCTION

This section is written to provide information to the body builder when installing equipment into vehicles built with multiplexed instrumentation. The technology presented by VECU level instrumentation integrates J-1939 CAN data communications between controllers and equipment on the vehicle. This section is intended to address how to work in aftermarket equipment while still maintaining full functionality of the OEM vehicle.

These topics apply to 2.1M chassis built with VECU architecture. The electrical architecture for these trucks will be named VMUX which replaces VECU01. This system integrates a parallel control unit to manage outbound messages via a faster baud rate 500kbps and FCAN signals for the chassis module(s). The F-CAN is located on the VECU, so the VCAN is divided into VCAN1 and VCAN2. The second CAN is dedicated to OBD communication.

The most important advancement of electrical instrumentation is the implementation of the VECU controller. While it is still possible to wire completely outside of the VECU system, utilizing the VECU functions will make a cleaner installation and will maintain OEM functionality. VECU expands controls to air operated devices by receiving input from dash switches, remote (aftermarket) switches, sensors mounted to the aftermarket equipment and other vehicle parameters (engine speed, transmission status etc.) With the proper programming, the VECU will then process the inputs and will create a J-1939 Data instruction which is communicated to another controller outside the cab called the Chassis Module. This chassis module receives the instruction and communicates the information to the air solenoid bank. Then 12V power will open the solenoid and supply air pressure the specified air circuit. The chassis module can also supply voltage to other systems on the chassis.

ELECTRICAL ACRONYM LIBRARY

Acronym	Definition
CAN	Controller Area Network
DTC	Diagnostics Trouble Code
ECM	Engine Control Module
ECU	Electrical Control Unit
EOA	Electric Over Air
EOH	Electric Over Hydraulic
J-1939	SAE CAN Communication Standard
LIN	Local Interconnect Network
MSB	Master Solenoid Bank
MSM	Master Switch Module
MUX	Multiplex Switch
OBD	On Board Diagnostics
OEM	Original Equipment Manufacture
PCC	Predictive Cruise Control
PDC	Power Distribution Center
PGN	Parameter Group Number
PTO	Power Take Off
RP1226	TMS Messaging Standard
SPN	Suspect Parameter Number
TCM	Transmission Control Module
VECU	Vehicle Electronic Control Unit

ELECTRICAL WIRING CIRCUIT CODES

The wire system uses 10 different colors and only one striped wire color. Each wire has a minimum of seven characters, with the first three characters as the wire color. The remaining four characters are related to the wire services. The colors determine the circuits function as follows:

ELECTRICAL WIRE CIRCUIT CODE TABLES

PACCAR Electrical Circuit Code		
Insulation Color	Color Code	Electrical Function
Red w/ white stripe	R/WXXXX	Direct battery power
Red	REDXXXX	Protected battery power
Orange	ORNXXXX	Ignition, Accessory, Low Voltage Disconnect, StartPower
Yellow	YELXXXX	Activated Power
White	WHTXXXX	Ground
Black	BLKXXXX	Load Return
Gray	GRAXXXX	Control
Brown	BRNXXXX	Indicator Illumination Backlit Illumination
Violet	VIOXXXX	Reference Voltage or +5VDC or Sensor Power
Light Blue	BLUXXXX	Sensor Signal
Light Green	GRNXXXX	Sensor common or Sensor Ground

Number			Category
XXX0000	through	XXX0999	General
XXX1000	through	XXX1999	Power Supply
XXX2000	through	XXX2999	Lighting
XXX3000	through	XXX3999	Powertrain
XXX4000	through	XXX4999	Instrumentation
XXX5000	through	XXX5999	Safety systems
XXX6000	through	XXX6999	Convenience, Security
XXX7000	through	XXX7999	HVAC
XXX8000	through	XXX8999	Undefined
XXX9000	through	XXX9999	Trailer/Body Connections

MULTIPLEX SYSTEM

The VECU electrical architecture uses a multiplexing system. Multiplexing can be defined as the process of sending multiple digital signals on the same shared medium at the same time. These signals are introduced into the multiplexing system through data connection points which are defined by J1939 backbone.

CAN BUS SPEEDS AND CIRCUIT DESIGNATION

J1939-14 (500KBPS):

B-CAN – 0813 Body Builder

C-CAN – 0821 Cab

D-CAN – 0822 Diagnostics

F-CAN – 0819 Frame

G-CAN – 0825 Bendix ACB Antenna

S-CAN – 0827 Radio and PACCAR Display

V-CAN1 – 0812 Vehicle1

V-CAN2 – 0823 Vehicle2

J1939-15 (250KBPS):

T-CAN – 0828 Transmission

K-CAN – 0829 Telematics and Remote PTO

ELECTRICAL COMPONENT OVERVIEW

ELECTRICAL HARNESS OVERVIEW

MAIN CHASSIS HARNESS
 1) Connections to Firewall Bulkhead
 2) Connections to Rear Chassis Harness
 3) Connections to Chassis Module
 4) Connection to Solenoid Bank
 5) Connections to Rear Chassis Harness
 6) Connections to Hood Harness

ENGINE HARNESS
 1) Connections to Main Chassis Harness
 2) Connections to Firewall Bulkhead
 3) Connections to Starter
 4) Connections to Aftertreatment Harness
 5) Connection to Engine ECU

REAR CHASSIS HARNESS
 1) Connections to Chassis Harness
 2) Connections to Tail Light

CAB ROOF HARNESS
 1) Connections to Main Cab IP Harness
 2) Connections to Antennas
 3) Connections to Roof Lighting

HOOD CHASSIS HARNESS
 1) Connections to Main Chassis Harness
 2) Connections to Head Lights
 3) Connections to Turn Signal Lamps

MAIN CAB IP HARNESS
 1) Connections to Firewall Bulkhead
 2) Connections to VECU
 3) Connections to Power Distribution Center
 4) Connections to Instrument Panels
 5) Connection to Allison TCM
 6) Connections to Cab Roof Harness

IN CAB CAN BASED MESSAGING CONNECTOR

RP1226 CONNECTOR

There are two RP1226 connectors located inside the cab. The first RP1226 connector is located on the left hand side of the steering wheel behind the dash near the OBD connector. The second RP1226 connector is located on the passenger side behind the dash. The RP1226 connector can be used for after-market telematics, ELD, body controls, and PTO controls. There will be multiple bus speeds available K-CAN for 250kbps and S-CAN for 500kbps. The RP1226 provides defined messages and major telematics supplier data for customer use.

Pin	Description

3	PTO PUMP MODE SIGNAL
4	#2 PTO ON/OFF

OPTIONAL 8 PIN PTO INPUT CONNECTOR

Pin	Description
1	12V IGNITION SIGNAL
2	PTO INTERLOCK INPUT (Active Low)
3	REMOTE PTO PRESET 3 (Active High)
4	REMOTE PTO PRESET 2 (Active High)
5	REMOTE PTO PRESET 1 (Active High)
6	REMOTE PTO PRESET INCREMENT + (Active High)
7	REMOTE PTO PRESET DECREMENT - (Active High)
8	VEHICLE GROUND

REMOTE THROTTLE AND REMOTE PTO CONTROLS

PACCAR MX Engines

Chassis must be ordered with the appropriate option to have a 12 pin connector on the chassis harness. All signals will feed into the Chassis Modules.

Wiring Function Description:

Connect pin 5 and pin 6 to pin 8 to activate PTO Mode Control (PMC) and Enable PTO Speed Control (PSC).

WARNING: DO NOT install a permanent jumper wire between Pins 5 and 6.

- "Bump up" Engine Speed: Connect pins 2 to pin 8 momentarily
- "Accelerate" Engine Speed: Connect pins 2 to pin 8 until desired RPM is reached then disconnect
- "Bump down" Engine Speed: Connect pin 1 to pin 8 momentarily
- "Decelerate" Engine Speed: Connect pins 1 to pin 8 until desired RPM is reached then disconnect
- "0-5v Variable Voltage Remote Throttle": See PTO section

P197C-Remote PTO Chassis

TRUCK CONNECTOR

Equipped: Optional
Available Locations: Firewall,
BOC/BOS, EOF
Supplier: Deutsch-DT Series

MATING CONNECTOR

Mating Connector:
PACCAR P/N: P20-1372-1112H
TE P/N: DT04-12PA-CE02
Terminals:
16-20 awg: 0460-202-16141
14 awg : 0460-215-16141
Plugs: 0413-217-1605

Note: Cap installed from Factory

WARNING!

DO NOT install a permanent jumper wire between pins 5 and 6. May cause unexpected vehicle behavior.

MX-11 and MX-13 Connector Location

Cummins Engines 12 Pin Connector

Chassis must be ordered with the appropriate option to have a 12 pin connector on the engine harness. The Body IGN signal was moved off the engine harness connector, so for Cummins, the Chassis Harness will include the PTO layer to insert the Body IGN signal back into the 12-way connector. Signals that feed directly to the engine ECM typically will be active low signals. Connect pins 3 and 5 for simple PTO ON/OFF signal. For Remote throttle bump, you must connect pins 3 & 6. Having a momentary switch to signal ground on pins 2 and 1 will then increase/decrease engine speed. Engine speed will depend on how engine is programmed. Unless otherwise specified, engine is set by default for incremental speed increase. Full remote throttle control can be achieved with a twisted triple to pin 4, 10, and 11.

Pin	Description
1	INPUT FOR REMOTE PTO RESUME (Active Low)
2	INPUT FOR REMOTE PTO SET (Active Low)
3	SWITCH RETURN
4	INPUT FOR REMOTE THROTTLE SENSOR CIRCUIT (TWISTED TRIPLE)
5	PTO ENGAGED SIGNAL (LOW = ENGAGED)
6	CRUISE ON/OFF (Active Low)
7	+12V 10A BODY IGN FUSE C_A6
8	VEHICLE GROUND
9	TORQUE LIMIT INPUT (Active Low)
10	PWR SUPPLY +5V(TWISTED TRIPLE)
11	ANALOG RETURN (TWISTED TRIPLE)
12	REMOTE ACCELERATOR ENABLE

X15 Connection location

DUAL STATION CONTROLS

When equipped, dual station controls allow extra controls from a remote station outside of the cab. The option will either include a 16-way connector, or a 23-way connector. When the in-cab PTO control switch is switched to the “on” position with the park brake applied, the engine will turn off unless the dual station remote run input is properly powered via the 16 or 23-way connector. To power the remote run input, terminal X of the 23-way connector or terminal L of the 16-way connector will be powered with a 12V+ input which will power terminal 87 of the remote run relay. To operate the remote start input, terminal F of the 23-way connector will be powered with a 12V+ input which will power terminal 85 of the remote run relay and terminal 85 of the remote start relay.

Following is a list of pin descriptions, and the required input or supplied output signal type for both the 23-way and the 16-way connectors for both PACCAR MX and Cummins engines. Also following are examples of wiring connections for common items used.

PACCAR MX ENGINE 16 PIN

Pin	Description	Input/Output	Destination/Source
A	External Regeneration Notification	Output, Active High	External Regen Relay, Controlled by Pin C7 of Optional Chassis Module
B	Remote Run	Input 12V (+)	Pin 87A Remote Run Relay
C	Remote Start	Input 12V (+)	Pin 87 of Remote Start Relay.
D	Remote Throttle Sensor Supply	Output, 5V (+) Supply	Pin E2 of Standard Chassis Module

CHASSIS MODULE

There will be two standard chassis modules with one primary chassis module on all trucks and a secondary for optional content. The primary chassis module will be mounted under the cab on the left hand side of the over-bell mounting bracket. The secondary optional chassis module will be located above the rail on the left hand side on the back of cab crossmember. There are hardware and software based protections to prevent damage. The standard chassis modules will generate and store faults to free up space for the VECU. The standard chassis module can be diagnosed through DAVIE service tool.

Chassis Module Locations

Plan View of Chassis Module Locations

CHASSIS MODULE FUNCTION DESIGNATION

Primary Chassis Module

- Exterior Lighting: Headlamps, Park/Tail, Turn, Brake, DRL, Reverse etc.
- Axle Temperature Sensor Inputs Front Rear and Rear
- Ammeter Sensor Input
- Secondary Kingpin Release Solenoid Control
- Primary/Secondary Fuel Level Sensors
- Lift Axle Air Solenoid Controls 1st, 2nd
- Primary Transmission Neutral Position Switch
- Remote PTO/Throttle Control Inputs
- J-CAN Multiplexed EOA Solenoid Bank Control
- Fuel Filter Gauges
- Main Transmission Oil Temp
- PTO 1 Activation

Secondary Chassis Module

- External Notification of DPF Regeneration
- AT1202 Aux Trans Neutral Switch
- Axle Temperature Gauges Center Rear
- Lift Axle Air Solenoid Controls 3rd , Tag (Rocker Panel Controls)
- NAMCO/FABCO Splitshaft PTO/Transfer Case Sensors
- Aux Transmission Temperature Sensor
- Split Shaft PTO Temperature Sensor
- Fuel Temp Sensor (Auto Start)
- Chicken/Panel Lamps, Snow Plow Lamp
- ISO 3731 Spare Outputs
- B-CAN
- Auto Start/Stop Hood Tilt Switch
- City Horn
- PTO 2, 3, & 4 Activation

FUSE GROUPS

PRIMARY CHASSIS MODULE

Fuse Group	Function
F1	Electric Over Air Solenoid Kingpin Release
	Main Beam (aka High Beam) - LH
	Tractor Direction Indication and Hazard Lights - RH Rear (Brake Lamps Also)
F2	Tractor Direction Indication/Hazard/DRL Lights - LH Front
	Front Tractor Position lights (Park Lamps)
	Tractor Direction Indication Hazard Side Turn Indicator LH Front
	Dipped Beam (aka Low Beam) - LH
F3	Lift Axle #2 Solenoid
	Daytime Running Lights (DRL) Peterbilt - LH
	Tractor Direction Indication/Hazard/DRL Lights - RH Front
	Tractor Direction Indication Hazard Side Turn Indicator RH Front
	Dipped Beam (aka Low Beam) - RH
F4	Daytime Running Lights (DRL) Peterbilt - RH
	Main Beam (aka High Beam) - RH
	Fog/Driving Lights (Front) 1st Set
F5	Reverse Warning (aka Backup Alarm)
	(Rear) Direction Indication and Hazard Lights - LH Trailer
F6	Rear Tractor Position lights (Park Lamps)
	Reverse Lamps
	Tractor Direction Indication and Hazard Lights LH Rear (Brake Lamps Also)
F7	LVD Bipolar Output 1
	LVD Bipolar Output 2
	Lift Axle #1 Solenoid
	(Rear) Direction Indication and Hazard Lights - RH Trailer

SECONDARY CHASSIS MODULE

Fuse Group	Function
F1	Work Lights 1st Set (Frame mounted Flood Light Options without pass-through grommet)
F2	Aftertreatment External Notification
F3	Sky/Auxiliary lights
	Snowplow Lamps OR Dual Station
F4	Lift Axle #3 Solenoid
	Trailer Options - ISO 3731/Spare OR Additional 4/6/7-Way Trailer Connections OR Berg Box
F5	Lift Axle #4 (Tag) Solenoid
	Trailer Options - ISO 3731/Spare OR Additional 4/6/7-Way Trailer Connections OR Berg Box
F6	Trailer Options - Trailer Dump Gate Coiled BOC OR Configurable Output
	Trailer Options - ISO 3731/Spare OR Additional 4/6/7-Way Trailer Connections OR Berg Box

VECU

Fuse Group	Function
F1	Peterbilt Driving Lights
	Inside/Outside Air Filter Control
	Starter Interrupt / Start Enable Relay Control
	Mirror Heat Relay
	Cab Dome Lamp
	Sleeper Dome Lamp
	Trailer Marker/Clearance Lamps
	Supply KL-30
F2	Recirculating Header Fan - Low Speed
	Trailer Hotline Relay
	Work Lights (Flood Lamps) 2
	Work Lights (Flood Lamps) 3
	Allison MTD PTO Controls - PTO 2
	Allison MTD PTO Controls - PTO 1
	Passenger Spot Lamp
	Work Lights (Flood Lamps) 1
	Beacon/Strobe
	Trailer Brake Lamps
	Trailer/Cab Park Lamps
	Recirculating Header Fan - High Speed
	Digital Vision System – Mirrors (DVS-M)
	Start Signal
	Right Hand Steer
	LED Headlamps Heater
	PTO Engaged Output for PTO Hour Meter and PTO Telltale
	Footwell Lamp
	Supply KL-30
Sensor Supply 5V	
F3	Cab Marker/Clearance Lamps Relay Output
	Washer Pump Control
	Auxiliary Lamps/ Chicken Panel Lamps
	MCS (Power)
	Windshield Wiper Control
	Supply KL-30
F4	Dash PWM Backlighting
	Dash Illumination 2
	Ignition Timer Relay Control

ELECTRIC OVER AIR SOLENOIDS

Air solenoids are devices that translate the electrical signal into physical functions that controls the air pressure in various circuits. The air solenoids are mounted to a bracket outside the cab. The solenoids are designed to stack on each other so that they share a common air supply which reduces the amount of air lines on the vehicle.

The aftermarket installer/final vehicle manufacturer needs to decide what type of valve to install and ensure that the documentation to the operator provides them with enough understanding of how the customized switches work.

SOLENOID BANK DIAGRAM

Overview Layout

SWITCHES

Overview Layout

Multiplexing = shorter wire bundles, improved diagnostics, and greater driver feedback. Safety critical switches use hybrid switch with hardwire for redundancy. The switches are less expensive with fewer wires behind the dash and on the chassis. The switches are self-diagnosable to improve troubleshooting with DAVIE.

Master Switch Module (MSM)

LIN Communication to/from Switches

CAN Communication to/from VECU

SPARE SWITCHES

Spare switches offer customers and body builders a convenient way to control power and air to various sources, like a body or trailer. They should be flexible and easily configurable to meet the vast and unique needs of body builders.

SWITCH RELEARN PROCESS

Switch replacement installation instructions:

1. Turn off the engine and all switches
2. Remove dash panel
3. Unplug LIN jumpers from the original existing switch
4. Remove original switch
5. Replace the old switch with the new switch
6. Reconnect LIN jumpers into the replacement switch
7. Reinstall the dash panel
8. Open the DAVIE4 application and connect to the truck and identify the vehicle
9. Select the "Repair Support" tab.
10. Select the "Driver Environment" tab
11. Select the "Learn Dash Switches"
12. When prompted by DAVIE Cycle the key on and then off
13. Run "Quick Check"
14. Clear Inactive DTCs (Diagnostics trouble code) from MSM
15. Finished

New switch installation instructions:

1. Turn off the engine and put all switches into the off position
2. Remove the dash panels
3. Remove the switch blank
4. Add the new switch into the dash panel
5. Connect the LIN jumper between the last open switch to the newly installed switch
 - a. Part Number S92-1127-0125
6. Reinstall the dash panel
7. Open the DAVIE4 application and connect to the truck and identify the vehicle
8. Select the "Repair Support" tab.
9. Select the "Driver Environment" tab
10. Select the "Learn Dash Switches"
11. Cycle the key on and then off
12. Run "Quick Check"
13. Clear Inactive DTCs (Diagnostics trouble code) on the MSM
14. Finished

DAVIE Switch Relearn Screen View

Switch Location

Switches on the same LIN bus can be reordered in any configuration without the need to run a relearn process with DAVIE4. Switches that are swapped across LIN busses will need to be relearned with DAVIE4. LIN bus 1 consists of all the switches on the D panel and B panel. LIN bus 2 consists of all the switches on the C panels.

Dash layout

GROUNDING

Grounding any post-OEM component/device/apparatus/etc. to the metal cab structure or frame is not acceptable. Failure to properly ground add-on components can result in vehicle damage and possibly bodily injury. Ground all post-OEM component/device/apparatus/etc. with combined current draw of less than 30A to the firewall ground buss bar with appropriately sized wire/cable for the load required.

Grounding Buss Bar Design

Grounding Point - Cab Interior Behind Driver's Side Kick Panel

Grounding Point - Cab Exterior LH Side of Firewall

Post OEM components/devices/apparatus/etc. with combined current draw in excess of 30A, ground must be attained from vehicle batteries directly with appropriately sized wire/cable for the load required.

SPARE POWER

Spare power connector P096 is located on lower left side of dash behind key switch or kick panel. The mating harness is available from PACCAR parts with pre-labeled pigtails, P92-8916-000000001. Any spare power requiring more than 20 amps must go directly to the battery box, not this spare circuit.

TERMINAL INFO: P096			
CAVITY	CIRCUIT NO.	PLT	
A	RED0711-1	SN	Spare Battery 1 / Fuse Cab Side P17 - 20A
B	RED0711-7	SN	Spare Constant Power 1 / Fuse Engine Side E10 - 20A
C	ORN0752-4	SN	Spare ACC 1 / Fuse Cab Side R10 - 20A
D	WHT1515-2	SN	Spare GND 1
E	ORN0731-9	SN	Spare IGN 1 / Fuse Cab Side K13 - 20A
F	ORN0731-8	SN	Spare IGN 2 / Fuse Cab Side E3 - 20A

DASH SIDE

Spare circuit location on Power Distribution Center (Dash-Side, P001)

Spare circuit diagram (P001 and P096)

JUNCTION BOX

The junction box provides access to lighting signals. The standard wiring for this code is as follows: Park terminal, marker lamp, stop, ground, turn RH, turn LH & a trailer abs line. Trailer hot line is fused for 25 Amps. Wiring of the junction box contains same circuits that are included in a J560 receptacle.

Junction Box BOC or EOF

TRANSMISSION BACK UP SIGNALS

The back-up signal can be accessed from pin D of the 6-way tail light connector located at the end of frame. The tail light connector is a 6-way connector located in the chassis harness at the end of frame. It will either be connected to a tail light, a jumper harness, or tied up in the rail if no tail lights are provided.

PIN	CIRCUIT DESCRIPTION
A	Park Lamp
B	Left Turn/Stop Lamp
C	Right Turn/Stop Lamp
D	Backup Lamp
E	Aux Chassis
F	Ground

Mating Connector: Packard PN 12020786

SNOW PLOW LIGHTING

When the optional switch and wiring for snow plow lights are ordered, the truck will include a switch on the dash to control the snow plow lights and a body builder connection at the front of the chassis.

Pin	Description
1	LOW BEAM LH
2	LOW BEAM RH
3	HIGH BEAM LH
4	HIGH BEAM LH
5	TURN INDICATOR LH
6	TURN INDICATOR RH
7	MARKER LAMPS
8	NOT USED
9	SNOWPLOW GROUND
10	SNOWPLOW GROUND
11	TURN INDICATOR, LH DRL
12	TURN INDICATOR, RH DRL

LIFT AXLES (PUSHERS & TAG)

All truck lift axles (pushers and tag) are direct wire Electric-Only. The wiring comes from the Primary Chassis Module or Secondary Chassis Module and goes direct to the axle mounted solenoid. This is not from the EoA Solenoid Bank. The activation signal comes from either a dash mounted MUX switch or a hardwired switch that is mounted outside of the cab. There are a total of four lift axle controls available; 3 pushers and 1 tag axle, or 4 pushers and no tag. These are controlled with separate switches by default, but it is possible to have a single switch control all axles if they are the same type. The customer can order the following configurations; steerable, non-steerable, with auto-reverse, and with park brake interlock. A lift axle comes with a control switch (single or separate), a gauge, and a regulator valve.

Lift Axle Diagram

Truck Lift Axle Logic

Lift Axle Type	Raise Condition Logic	Lower Condition Logic
Steerable Lift Axle w/o Auto-Reverse	- Lift Switch is Inactive OR - Park Brake Active OR - Trans in Reverse	- Lift Switch is Active AND - Park Brake Inactive AND - Trans Not in Reverse
Steerable Lift Axle with Auto-Reverse OR Non-Steerable Lift Axle w/o Park Brake	- Lift Switch is Inactive OR - Park Brake Active	- Lift Switch is Active AND - Park Brake Inactive
Non-Steerable Lift Axle with Park Brake	- Lift Switch is Inactive AND - Park Brake Inactive	- Lift Switch is Active OR - Park Brake Active

Trailer Lift Axle

Trailer lift axles can be either EoA or Electric-Only type. There are a total of two available EoA trailer lift axle controls using latching solenoids. If one axle is ordered, the customer will receive a switch labeled “Trailer Lift Axle”. If two axles are ordered the customer can have a single switch that controls both axles or two switches. If two switches are present they are labeled “Forward Trailer Lift Axle” and “Rear Trailer Lift Axle”.

DIGITAL DISPLAY

GAUGES

Gauges and switches are fastened directly to the panel. Once the panel is free, the gauge or switch can be installed. Gauges are held by a screwed on collar while switches have a plastic tab.

Optional gauges may be installed and connected to the Digital Display via a jumper harness.

TELLTALE ICONS

Custom Telltales will no longer be available with a physical card inserted into the dash cluster. Instead, the body builder telltales will populate on the digital portion of the display from a limited list and can be reconfigured using PVP at your local Peterbilt dealership. The location of the telltale will be dependent on the configuration of the vehicle and what other telltales are present on the digital display.

TELLTALE CONNECTOR LOCATIONS

SECTION 8 POWER TAKE-OFF (PTO)

INTRODUCTION

A Power Take Off (PTO) provides a way to divert some or all of the trucks engine power to another component. There are a wide variety of PTO options available.

PTO Acronym Library

Acronym	Definition	Acronym	Definition
ABS	Anti-Lock Braking System	PMC	PTO Mode Control

TRANSMISSION MOUNTED PTO

MANUAL TRANSMISSIONS

This is the most common type of PTO that is used. On a manual transmission there are two locations for PTO's. On medium duty transmissions there are 6 bolt PTO locations on the right and left. On heavy duty manual transmissions there is a 6 bolt PTO on the right and an 8 bolt PTO on the bottom left. There are also some options for a thru shaft or extended countershaft PTO. On a thru shaft PTO, the counter shaft extends out through the back of the transmission which can be used to power a PTO. When using a thru shaft PTO the vehicle must be spec'd with the correct option as not all transmissions will be set up for use with thru shaft PTO's. For more information go to www.roadranger.com and enter "PTO Installation Guide" in the search bar in the upper right corner.

MD Automated

HD Automated – Ultrashift Plus – VCS and VMS

AUTOMATIC TRANSMISSIONS

On Allison transmissions there are two locations for PTO's. The Allison 4000 series has PTO locations at 1 and 8 o'clock viewed from the back of the transmission. The 4000HS transmissions do not have any PTO locations. The 3000 series Allison transmissions have PTO locations at 4 and 8 o'clock. For more information on using PTO's with an Allison transmission go to www.allisontransmission.com and refer to the "Rugged Duty Series Brochure" and "PTO Request Flyer" which is available in a 1000/2000 version and a 3000/4000 version.

Some PTO configurations will have clearance issues with other components on the truck. With manual transmissions, a 6-bolt PTO on the right will typically clear most components when the DPF/SCR are under the cab. This is also true when 30 and 45 degree adapters are used. On Allison 4000 series transmissions, most PTO's will fit in the 1 o'clock position without interfering with the cab. If a wet kit is used here, the dipstick housing will most likely need to be modified as it runs over the top of the transmission to the driver side of the vehicle. The PTO in the 8 o'clock position is typically ok. There are some scenarios where the PTO will be very close to or could interfere with the rear spring shackle on the front suspension. This problem can occur on vehicles with a set-back front axle and the problem is amplified on the short hood models.

Allison 4000 Series

Allison 3000 Series

AUTOMATED TRANSMISSIONS

PACCAR 12 Speed and Endurant Transmission

The automated transmission is ideal for highway fleets interested in a light-weight fuel efficient transmission. The transmission also offers broad torque coverage of 1450 to 1850 lb-ft without the use of an oil cooler.

The PACCAR 12-Speed (used with PACCAR MX engines) and Endurant Transmissions (used with Cummins engines) requires a different type of PTO, previous PTO models are not compatible. Contact PTO manufacturer to verify the correct PTO for the automated transmission. Failure to use the correct PTO results in transmission damage.

PTO Capabilities are 8-bolt, bottom-mount, 95 HP available while stationary and at low speeds in gears 2, 4, and R2.

Endurant Transmission

PACCAR 12 Speed

PACCAR 18 Speed and Endurant Transmission

The PACCAR TX-18 and TX-18 PRO, and Endurant XD and Endurant XD PRO Transmission include standard dual PTO accommodations, including an 8-bolt bottom mount, and a 4-bolt rear mount. Both power take-offs operate at 111% of engine speed with a total combined PTO capacity of 160 horsepower or 610 lb.-ft. of torque.

Like the PACCAR 12-Speed and Endurant Transmission, the PACCAR 18-Speed and Endurant XD transmissions require a different type of PTO, and previous PTO models are not compatible. Contact PTO manufacturer to verify the correct PTO for the automated transmission. Failure to use the correct PTO results in transmission damage.

Endurant XD Transmission

PTO INTERFACE

The following information shows the different types of PTO wiring setup diagrams for the automated transmission.

REAR ENGINE PTO

Rear Engine PTO (REPTO) is commonly used in cement mixer and feed lot applications. The REPTO is driven off the rear gear train on the engine. There is a 1350/1410 flange on the bell housing in the 1 o'clock position that can be used to attach a hydraulic pump or driveshaft.

The REPTO flange will always be turning when the engine is running and the output rotation is the same as the engine.

Engine	REPTO Ratio (vs Engine Speed)
PACCAR PX-9	1.15:1 RATIO
PACCAR MX-13	1.2:1 RATIO
CUMMINS ISX12N	1.32:1 RATIO
PACCAR MX-11	1.3:1 RATIO

PTO QUICK EXHAUST VALVE

Depending on the PTO being used, it may be beneficial to include a quick exhaust valve onto the air fitting of the air-shift cover. The quick exhaust valve will prevent any backflow of air experienced by the PTO, preventing any oil contamination that may enter the EOA solenoid air line. It is recommended to install a quick exhaust valve if there is any notice of oil present in the solenoid or if there is evidence of oil making its way in the air line. Oil intrusion into the solenoid may cause improper actuation of the internal armature, preventing the PTO from turning on.

Usage Notes:

1. This application guide is only applicable to PTOs with an air shift option.
2. Inspection of the EOA solenoid and corresponding air line should be made before installation of the quick exhaust valve. If there is evidence of oil contamination, the air line should be flushed and the solenoid should be replaced before installation of the valve.
3. Orientation of the valve does not have a defined angle.
4. The suggested quick exhaust valve for this application is Humphrey SQE2VAI. Other valves might not have the same properties and may not operate as intended.
5. Depending on location of the PTO, a breather vent may need to be added onto the exhaust port of the quick exhaust valve. This will prevent any road contaminants from entering the exhaust side.
6. It is suggested to only use a quick exhaust valve within its normal operating temperature range of -25°F to 180°F.

PTO MOUNTING CLEARANCE

This application guide indicates if a PTO has sufficient clearance to truck components in various mounting configurations. A green "ok" indicates that there is sufficient clearance to other truck components. A red "x" indicates that there minimal or no clearance and the application is not recommended. The truck components investigated in this guide include frame rails, Set Back Front Axle (SBFA) rear shackle, SBFA Front Air Suspension (FAS) rear shackle, coolant return manifold, transmission clutch actuator, and exhaust system components.

Usage Notes:

1. This application guide is only applicable to 2.1M trucks.
2. Only the specified PTO configurations have been analyzed.
3. Underframe exhaust limits access behind PTO's for shaft drives and other PTO attachments.
4. Eaton FR transmissions require the use of a 30° adapter when installing Chelsea or Muncie transmission PTO's in the right hand position.
5. Eaton RT transmissions require the use of a 49° adapter when installing Chelsea transmission PTO's in the right hand position.
6. Eaton RT transmissions require the use of a 55° adapter when installing Muncie transmission PTO's in the right hand position.
7. Eaton transmissions require the use of a 6 to 8 Bolt adapter when installing a 6 bolt PTO in the bottom position.

6 and 8-Bolt PTO's for Eaton Transmissions

Notes:

- 1) Not available with Front Air Leaf Suspension.
- 2) Not available with Right Hand behind Fairing Exhaust Systems.
- 3) Restricted PTO access with RH Cab Step Assembly DPF-SCR exhaust systems with Vertical BOS tailpipes or RH Horizontal Tailpipe below rail.
- 4) The Optional Hydraulic Clutch Orientation must be used with this PTO.

S = Standard Hydraulic Clutch Actuator Configuration
 O = Optional Hydraulic Clutch Actuator Configuration

Dual PTO Compatibility for Eaton Transmissions

Note:
 The actuator should not be flipped upside down to achieve PTO clearance.

1. Bleed nipple should always be above centerline.
2. Drain should always be below centerline.

HYDRAULIC CLUTCH ACTUATOR CONFIGURATIONS
 (Only used with 2.1M models with Eaton FR or RT transmissions)

Standard Configuration
 Air assist connection faces driver's side
 Used with all but Chelsea 880 and 885 PTOs

Bottom Mount PTO Provisions
 Air assist connection faces passenger's side
 Used with Chelsea 880 and 885 PTOs

MX PTO MODE CONTROL (PMC)

MX PTO Mode Control (PMC) includes features, limits, and protections that are active in PTO Mode. It also includes PTO Speed Control (PSC) functionality that includes a variety of useful ways to control engine speed during PTO operation.

Reference the VECU Programming Guide for detailed information on PTO Mode Control configuration, functionality and usage.

MX PTO MODE ACTIVATION

There are three ways to activate PTO Mode. PMC parameter(s) must be enabled on the vehicle in order for PTO Mode to activate.

- Active feedback of physical PTO engagement
 - Trucks with factory installed PTOs or that are coded for Customer Installed PTOs will come prewired to receive the PTO engaged signal.
- Active PTO Mode Switch
 - The PTO Mode Switch can be configured at the time of order or in the aftermarket. The PTO Mode switch can be used to activate PTO Mode independent of PTO engagement and may be useful for trucks with FEPTOs or REPTOs that need the ability to use PMC features.
- PTO Mode Request over the CAN bus

**PTO Mode Switch****MX PTO MODE CONTROL LOCATION**

Vehicles can be configured to control PTO functionality from a cab location and/or a remote location (outside the cab). Most PTO Mode Features and Interlocks have a cab station option and a remote station option. This allows a vehicle to be configured for two unique jobs. For example a vehicle could be configured for mobile cab station operation with one set of limits and stationary remote station operation with a different set of limits.

If a vehicle is configured for both cab and remote PTO control, a PMC Location Switch must be installed on the dash. This switch will determine which set of PTO Mode Features to apply and which control location to use.

**PMC Location Switch**

MX PTO MODE FEATURES

The following features and configurations are available when PTO Mode is active.

- Cab Accelerator Configurations
 - Disable in PTO Mode
 - Torque Control (Automotive Style)
 - Speed Control
 - Enable in Remote PTO Mode
- Log Time and Fuel in PTO Mode
- Disable Engine Idle Shutdown Timer (EIST) in PTO Mode
- PTO Mode Specific Engine Idle Shutdown Timer (EIST)
- Fan On in PTO Mode
- Adjustable PTO Engine Speed Governor Responsiveness (for light or heavy varying loads)

MX PTO MODE PROTECTIONS AND LIMITS

The following protections and limits are available when PTO Mode is active. Protections and limits are active when PTO Mode is active and will continue to be active until PTO Mode is no longer active.

- Max Vehicle Speed
- Max Engine Torque
- Max Engine Speed – Accelerator Controlled
- Max Engine Speed – Switch Controlled
- Min Engine Speed
- Max Rate of Engine Speed Change

MX PTO SPEED CONTROL (PSC) FEATURES

PTO Mode must be active prior to using PTO Speed Control (PSC) to control engine speed. PSC is available from both the cab station and remote station (see PTO Mode Control Location Section above). In the cab location, cruise control switches and PSC specific switches are used to control engine speed. Equivalent remote station inputs are available (Reference Remote PMC Connections section below).

- + / -
 - Configurable to either command one unique preset when “+” is pressed and a second unique preset when “-” is pressed OR toggle through up to 6 presets.

- Preset 1, 2 & 3
 - 3 Dedicated Presets with the following configuration options.
 - Latch: Hold Preset Speed When Switch is Released
 - Cancel: Cancel PSC When Switch is Released
 - The Remote PTO Inputs for Presets 1, 2 & 3 can be configured to function when Cab PTO Mode is active
 - In some applications, it may be useful to connect the Remote PTO Inputs for Presets 1, 2 & 3 to something other than a hand-operated switch. For example, the inputs can be configured to activate based off PTO engagement, hydraulic pressure or equipment movement.

Dash Switches

Dedicated Preset Switches

MX PTO SPEED CONTROL INTERLOCKS

PTO Speed Control Interlocks cancel PSC when active. There is an option to disable the accelerator when a PSC interlock is active. When a PSC interlock is active the engine speed will return to the Minimum Engine Speed in PTO Mode or the engine speed commanded by the accelerator if applicable. An active PSC interlock does not disable PMC protections and limits.

The configurable PSC interlocks are listed below.

- Clutch Pressed
- Park Brake NOT Set
- Transmission NOT in Neutral
- Service Brake (Configurable for Pressed or NOT Pressed)
- Custom Hardwired Interlock (Configurable Polarity)

A custom hardwired interlock input is available that will allow a body builder to create a customized interlock for their specific application. This interlock functions for both Cab and Remote Station PSC. Many types of switches such as hand-operated switches, hydraulic pressure switches, equipment position switches, or pressure plate switches can activate the interlock. The switch polarity is configurable which allows the body builder to choose the interlock state if the circuit fails.

PTO SPEED CONTROL ICONS

During PSC operation there will be icons on the digital display that indicate:

- PSC Enabled (white icon) or Active (green icon)
- PSC Control Location (designed by “Cab” or “Remote”)
- PSC target engine speed when active

Cab PTO Active

Remote PTO Active

Cab PTO Enabled

REMOTE PMC CONNECTIONS

There are options to control PTO functionality from the following locations.

- Engine Bay – Hardwired option only
- RP1226 Connection in the Cab – CAN bus connection only
- BOC/BOS – Hardwired and CAN bus connections
- EOF – Hardwired and CAN bus connections

There are options available for the body builder to specify controller speeds of 250 kbps or 500 kbps.

MX PTO CAN functionality may be accessed in the cab through the RP1226 connector and remotely through the body connectors K-CAN (E-3375-021) and B-CAN (DTM06-2S-EP10) Connectors.

MX PTO hardwired functionality may be accessed in the engine bay or on the frame through optional 12-Way and 8-Way connectors

**12-Way Deutsch
Connector**

**8-Way Deutsch
Connector**

**RP1226 Delphi
Connector**

Pin-out information for the PTO connectors can be found in the Electrical Section

MX PTO TROUBLESHOOTING GUIDE

The following table is a trouble shooting guide for MX PTO functionality.

SYMPTOM	POSSIBLE CAUSE	SOLUTION
<p>No green PTO cluster telltale (PMC is not active)</p> 	<p>PTO Mode Switch is not installed</p>	<p>Install and apply PTO Mode Switch</p>
	<p>PTO engagement feedback is not provided to standard/optional chassis module</p>	<p>Provide PTO engagement feedback to SCM (PTO#1) and/or OCM (PTO#2)</p>
	<p>PTO ball switch is faulty</p>	<p>Check that PTO ball switch is providing power or ground</p>
	<p>PTO device is not engaging due to air supply solenoid or electric signal not active</p>	<p>*Check EOA parameter settings in PVP *EOH PTOs are configured with parameter P816 *Check popups on driver display for interlock conditions (PTO engagements may be configured with park brake or PTO interlocks dependent on EOA parameter settings, these will result in popups on driver display)</p>
<p>PTO cluster telltale blinks intermittently</p> 	<p>PTO engagement feedback connection is faulty</p>	<p>Check PTO engagement feedback to SCM/OCM</p>
	<p>PMC switch connection is intermittent</p>	<p>Verify PMC switch connection (LIN jumper)</p>
<p>FIC or Cruise Control appears instead of PTO Speed Control on driver display</p>   <p>(when green PTO cluster telltale is present)</p> 	<p>Both Cab and Remote control locations are configured in PVP, but PMC location switch is not installed</p>	<p>Install PMC location switch, or select Cab <u>or</u> Remote control location in PVP</p>
	<p>PTO/CC On/Off switch is not applied</p>	<p>Press/apply the PTO/CC On/Off switch on steering wheel or dashboard (cab controls) or remote station (pin 6 on P197) or via J1939 PTO SPN980 (remote controls)</p>
	<p>CAB and/or Remote PMC is not configured</p>	<p>Enable CAB and/or Remote PMC in PVP and re-flash the VECU (PMC location switch is required if both control locations are configured)</p>

<p>White PTO icon appears, but no green PTO Speed Control icon on driver display</p> 	<p>PTO Speed Control is not active</p>	<p>Activate PTO Speed Control using cab or remote Set/Resume, +/-, Dedicated Preset, or J1939 PTO inputs. See PTO Mode Control Flowcharts in this section.</p>
	<p>PTO Speed Control switches are not enabled</p>	<p>Enabled PTO Speed Control switches P543 (Cab +/-), P610 (Cab Set/Resume), PXXX (Cab Dedicated Preset), P576 (Remote +/-), P611 (Remote Set/Resume, or P568/P569 (Remote Dedicated Preset)</p>
	<p>PTO Speed Control interlock is violated</p>	<p>Check that enabled PTO Speed Control interlocks are satisfied for cab and/or remote controls:</p> <ul style="list-style-type: none"> *Park brake *Service brake active or inactive *Neutral position *Custom interlock *SCR/DEF Level Inducement *Adaptive Cruise Control fault *ABS Braking Event *Stop Engine Lamp
	<p>Current PTO Speed Control location is not selected (when configured for Cab AND Remote control)</p>	<p>Select CAB or REMOTE control location using PMC location switch</p>
<p>Green PTO Speed Control icon on driver display appears, but engine speed will not change</p> 	<p>PMC engine speed slew rates are zero</p> <p>PMC engine torque limit is too low</p> <p>PSC Increment and/or decrement intervals are zero</p> <p>PSC Presets are not enabled or are programmed to the Min Engine Speed in PTO Mode</p>	<p>Change engine speed slew rates to non-zero values</p> <p>Increase engine torque limit</p> <p>Configure increment and/or decrement to non-zero values</p> <p>Enable PSC Presets and program preset values greater than the Min Engine Speed in PTO Mode</p>
<p>Cab accelerator pedal does not control engine speed</p>	<p>Cab accelerator control is not enabled</p>	<p>Enable the accelerator in Cab Control (P545), and/or Remote Control (P577) in PVP and re-flash the VECU</p>

Remote accelerator pedal does not control engine speed	PTO Mode Control is not active	Activate PTO Mode Control using PMC switch, provide PTO engagement feedback, or over the CAN bus
	Remote accelerator control is not enabled	Enable the remote accelerator control (P578) in PVP and re-flash the VECU
	PTO Speed Control interlock is violated	Check that enabled PTO Speed Control interlocks are satisfied: *Park brake *Service brake *Neutral position *Clutch position *Custom interlock *SCR/DEF Level Inducement *Adaptive Cruise Control *ABS Braking Event *Stop Engine Lamp
	Remote accelerator pedal has not returned to the fully released/zero position after entering PTO Mode Control	Calibrate/release remote accelerator to zero position
J1939 PTO CAN message does not affect PTO Speed Control	Remote controls are not configured and/or selected	Configure Remote PTO Mode Control and ensure it is selected using PMC Location switch (if Cab and Remote are both enabled)
	Body controller source address is not equal to 7d or 33d (0x21)	Configure body controller source address equal to 7d or 33d (0x21)
	J1939 PTO SPN980 (PTO Governor Enable Switch) is not equal to 1 (enabled)	Send J1939 PTO SPN 980 equal to 1
J1939 TSC1 CAN message does not affect PTO Speed Control	Remote controls are not configured and/or selected	Configure Remote PTO Mode Control and ensure it is selected using PMC Location switch (if Cab and Remote are both enabled)
	Body controller source address is not equal to 7d or 33d (0x21)	Configure body controller source address equal to 7d or 33d (0x21)
	J1939 TSC1 SPN695 (Override Control Mode) is equal to zero	Send J1939 TSC1 SPN695 equal to 1, 2 or 3
	J1939 TSC1 SPN3350 (TSC1 Control Purpose) is not 2 (PTO Governor)	Send J1939 TSC1 SPN3350 equal to 2

This page is intentionally left blank.

SECTION 9 AFTERTREATMENT

INTRODUCTION

The following section is designed to give you information regarding the aftertreatment systems on Peterbilt chassis.

All Peterbilts equipped with 2024 emission level engines will utilize Selective Catalyst Reduction (SCR). SCR is a process in which Diesel Exhaust Fluid (DEF) is injected into the exhaust downstream of the engine. DEF is converted to ammonia by the heat of the exhaust system. Inside of the SCR canister a catalyst causes a chemical reaction to occur between the ammonia and NOx, turning it into water and nitrogen. For more information on the specific details of how SCR works, please contact your local Peterbilt dealer.

DEF SYSTEM SCHEMATIC

On most Peterbilt chassis the DEF Supply Module (or pump) is integrated into the DEF tank. Peterbilt does not allow relocation of this pump. The following schematic details how the DEF lines route to the aftertreatment system.

2024 Coolant Flow

FIGURE 9-1. DEF System Schematic

DEF will freeze at approximately 11° F. In order to keep DEF from freezing all tanks will be heated with engine coolant. The following schematic shows the routing of these lines. It is critical that the system is not compromised in any manner.

FIGURE 9-2. DEF Coolant Routing Schematic

GENERAL GUIDELINES FOR DEF SYSTEM

The installation of the DEF tank is a critical component of the aftertreatment system. While Peterbilt does not recommend relocating the DEF tank, there are applications and body installations that will require it. The guidelines below must be strictly followed by any entity relocating the tank. Failure to follow the guidelines completely and accurately may result in engine shut-down situations.

PACCAR-approved DEF hoses are required when retrofitting for system to function properly. The use of unapproved hoses for DEF lines will void warranty and may cause engine shut-down situations. The DEF pump (or Supply Module) cannot be relocated from the DEF tank.

Peterbilt offers a variety of DEF tank sizes to meet every application. The DEF tank volume is regulated by the EPA. Peterbilt advises against modifying the tank volume after the truck has been delivered from the factory. These are estimated nominal (published) maximum fuel capacities for various DEF tanks, engines, and fill ratios. Dosing rates for these calculations are also shown.

TABLE 9-1. DEF Fuel Ratios

DEF TANKS	2024 Heavy Duty Fuel Volume Allowed (Usable Gallons)							
	Standard DEF to Fuel Ratio (2:1)				Minimum Recommended DEF to Fuel Ratio (1.25:1)			
	CUMMINS X15	PACCAR MX-11/MX-13		PACCAR PX-7/PX-9	CUMMINS X15	PACCAR MX-11/MX-13		PACCAR PX-7/PX-9
EPA / CARB	CARB	EPA	EPA / CARB	EPA / CARB	CARB	EPA	EPA / CARB	
SMALL	104		132	145	162		206	227
MEDIUM	174		221	244	272		346	380
LARGE	220		280	308	344		437	481
MEDIUM AERO	147		188	207	230		293	323
LARGE AERO	197		251	276	308		392	432
RECTANGULAR	58		74	82	91		116	128
MED AERO (w/ DEF STEPS ONLY)	153		195	215	240		305	336

INSTALLATION REQUIREMENTS AND DIMENSIONS FOR DEF SYSTEM

When relocating any DEF system components, the locations must meet the guidelines below. Failure to comply may result in non-conformance to EPA standards and engine shutdown.

With all relocating procedures, general clearances and routing guidelines must be followed. See section 10 of this manual for general routing guidelines.

When relocating the components the maximum pressure DEF hose length, from Supply module to Dosing Module, is 5.5 meters (216.5").

Maintain a minimum of 3" clearance to shielded exhaust components when routing DEF lines to prevent possible melting.

If the DEF tank is relocated the coolant lines will need to be modified. During this process if the tank is moved forward on the chassis (closer to the engine) it is necessary to remove excess coolant lines and maintain the original routing path. If the tank is moved rearward on the chassis the additional length of cooling line required to complete the installation must be installed in a straight section of the existing coolant routing lines. This process minimizes the change in coolant flow by mitigating changes in restrictions. Changes in restriction are added with excessive line length and bends. Work with your local Peterbilt dealer if you are unsure about the coolant line modifications.

ROUTING TO THE DOSING MODULE (INJECTOR)

A DEF pressure line “trap” is no longer required after EPA 2013 emissions level engine. The dosing module (injector) no longer needs to be purged and relative heights of components are no longer critical. See Figure 9.3 below for typical routing with RHUC exhaust and LH DEF tank shown.

FIGURE 9-3. Routing for DEF and Coolant Lines

DEF SUPPLY MODULE MOUNTING REQUIREMENTS

The Supply Module (or Pump) standard mounting location is on the DEF tank assembly. Body builders may need to relocate this component, and should follow the location and length restrictions above. Additionally the mounting and the orientation of the Supply Module must not exceed 45° from vertical in any direction. The supply module should be located in a space that will minimize its vulnerability to road debris. Serviceability of the supply module filter should be considered, and adequate space for filter access and removal should be given (at least 5”).

FIGURE 9-4. Supply Module Mounting Angle Limits

This page is intentionally left blank.

SECTION 10 ROUTING

INTRODUCTION

This section specifies the general requirements for securing hoses and electrical wires to present an orderly appearance, facilitate inspection and maintenance, and prevent potential damage to these lines.

DEFINITIONS

Bundle: Two or more air, electrical, fuel, or other lines tied together to form a unitized assembly.

Clamp: A cushioned rigid or semi-rigid, anti-chafing device for containing the bundle and securing it to the frame or other structural support. Standard clamps have a black elastomer lining. High temperature clamps (e.g., those used with compressor discharge hose) have a white or red elastomer lining (most applications for these are called out in the bills of material). An assembly of two clamps fastened together to separate components is referred to as a “butterfly” clamp. Note: the metal portion of clamps shall be stainless steel or otherwise made capable, through plating or other means, of passing a 200 hour salt spray test per ASTM B117 without rusting.

Metal hose clamps should not be used for harness routing when they cannot be sized correctly and allow movement inside the clamp. This movement can cause the elastomeric portion to wear down to the metal portion.

FIGURE 10-1. Clamp and Butterfly Clamp

Butterfly Tie: A tough plastic (nylon or equivalent) locking dual clamp tie strap used to separate bundles or single lines, hoses, etc. These straps must be UV stable. (Tyton DCT11)

FIGURE 10-2. Butterfly Tie

Tie Strap: A tough plastic (nylon, or equivalent) locking strap used to tie the lines in a bundle together between clamps or to otherwise secure hoses and wires as noted below. These straps must be UV stable.

FIGURE 10-3. Tie Strap

Heavy Duty (HD) Mount: A black rigid device used for securing a tie strap to the frame or other structural support. Mounts are made of impact modified, heat stabilized UV resistant nylon capable of continuous operation between temperatures 220°F (150°) and -40°F (-40°).

FIGURE 10-4. Heavy Duty (HD) Mount.

NOTE: Heavy duty tie straps 0.50in (12.7mm) wide (Tyton T255ROHIR or similar) shall be used whenever HD mounts are specified, although 0.25in (6.4mm) tie straps may be used in some specified applications.

Excess of material: More than 3 inches of slack for every 14 inch section of hose routing, except for air conditioner hoses.

Shortness of material: Less than 1 inch of slack on a 14 inch section of hose routing.

ROUTING REQUIREMENTS

Electrical Wiring

- Don't bend wires or use tie straps within 3 inches (75 mm) of (connected) wire connectors or plugs.
- Electrical wiring must be routed so that other components do not interfere with it
- Electrical wiring must be routed away from moving components so that at least 13.0 mm (0.5 in.) of clearance exists when the component is in operation and at maximum limits of the component's travel
- Electrical wiring must be protected in the locations they are routed
- Electrical wiring must be routed to avoid heat sources
- Electrical wiring must be secured to a crossmember when going from one frame rail to the other
- When crossing other components, electrical wiring must be separated from the component with a standoff or butterfly tie clamp
- Electrical wiring must not be routed directly over a sharp edge unless separated from the edge by a clip, standoff bracket, or similar spacing feature that prevents any risk of chafing or cutting
 - Alternatively, the installation of windlace applied to the edge along with PSA tape or convoluted tubing on the harness is acceptable
- Electrical wiring must be routed in a way that will not place strain on connectors.

Wires in Bundles

Electrical wires (other than the exceptions covered below) running parallel with air or coolant hose bundles, may be included in the bundle if they are isolated from the hoses with a covering of convoluted plastic tubing.

Exceptions:

Battery cables (including jump start cables) may be bundled with or tied to the charging wire harness. They shall not be bundled with or tied directly to any other components, including hoses, wires, or bundles. They shall be separated from other routed components using butterfly ties at intervals not exceeding 14 inches (356 mm). Battery strap tie down (W84-1000, Y84-6000-014, or T255R0H1R) shall be used without exception to secure battery cables to frame mounted or other major component (e.g. engine, transmission, etc.) mounted standoffs at intervals not exceeding 14 inches (356 mm). The (positive) battery cable shall be covered with convoluted plastic tubing from terminal to terminal.

110/220 volt wires for engine heaters, oil pan heaters, transmission oil heaters and battery pad warmers, shall not be included in any hose/wire bundle with a fuel hose. Individual heater wires not in a bundle shall be separated from other components by using butterfly clamps or butterfly ties at intervals not exceeding 14 inches (356 mm). Heater wires with a secondary covering shall be covered with convoluted tubing whether they are in bundles or not.

Wires Crossing Other Components

Electrical wires crossing over other components, such as lines, bolt heads, fittings, engine components, lifting eyes, engine block, cylinder head, etc., close enough to rub shall be isolated with a covering of convoluted tubing and separated from the component by using butterfly tie clamps, butterfly ties, or plastic sheathing. 110/220 volt engine heater wiring shall be installed with butterfly ties or butterfly tie clamps

Piping

Use no street elbows in air brake, water, fuel, or hydraulic systems unless specified on the piping diagram and the build instructions.

Use no elbows in the air brake system unless specified on the air piping diagram and the build instructions.

Hoses Crossing Components

Hoses crossing over other components close enough to rub shall be protected with a secured covering of convoluted plastic tubing (part number K344-813), another section of hose, or plastic sheathing (part number K213-1312). The usage of butterfly ties, or butterfly clamps are also recommended.

Air Compressor Discharge Hoses

Wires or hoses shall not be tied to the high temperature air compressor discharge hose. Hoses and wires may be routed across the air compressor discharge hose at a distance of 18 inches (457 mm) or greater from the compressor discharge port. In this case the crossing hoses and wires shall be "butterfly" clamped to the air compressor discharge hose and covered with convoluted tubing at the clamp point (use high temperature clamps on the compressor hose).

Bundles

HD mount and tie strap, or clamp shall be located at intervals not to exceed 14 inches (356 mm) along the bundle.

Regular tie straps shall be located at intervals not to exceed 7 inches (178 mm) between HD mount or clamps. Extra tie straps may be used as needed to contain the hoses and wires in the bundle.

Routing of Wires and Hoses near Moving Components

Wires and Hoses shall be routed away from moving components, such as fans, shackle links, drivelines, steering linkages, etc. so that there is at least 0.5 inches (12.7 mm) clearance when the component is operating at its maximum travel limits.

A minimum clearance of 1.0 inches (25.4 mm) shall be maintained between steering axle tires (and associated rotating parts) in all positions and routed components, such as hoses, oil lines, wires, pipes, etc.

ROUTING OF WIRES AND HOSES NEAR EXHAUST SYSTEM

TABLE 10-1. Exhaust – System Clearance

Description	Shielded	Unshielded
Coolant hoses (Silicone, colored)	1" minimum	2" minimum
