

ARTECH

Peterbilt ARTech™ is Peterbilt's proprietary software designed to innovate dealer service and improve customer uptime. ARTech utilizes 3D and augmented reality views of Peterbilt trucks, along with key service tools such as TCS365, SmartLINQ® and PACCAR Solutions Service Management, in an integrated platform easily accessible via an Apple iPad to help your service technicians perform their job more efficiently and more effectively. ARTech also includes access to truck-specific chassis information and diagrams and can even be used offline as well to support mobile service and repairs away from the dealership. ARTech helps drive customer uptime by getting trucks serviced and back on the road as quickly as possible.
